Total waste volume:		83.9 m ³

Comment on volumes: Arisings are in line with current decommissioning programmes and strategy. Waste within this waste stream is generated from a number of decommissioning projects which will commence at a future date. As a result of this, minimal characterisation of waste volumes and fingerprints has been carried out and hence there is a large uncertainty in the potential arisings. Preliminary assessments indicate that the volumes may vary from -30% to +200% for ILW.

Uncertainty factors on volumes:
 Stock (upper): x Arisings (upper) x 3.0
 Stock (lower): x Arisings (lower) x 0.7

PACKAGING AND CONDITIONING

Conditioning method: The waste will be subject to in-situ size reduction prior to placing in a 3 m³ Decommissioning Concrete Container (DCC). No further size reduction or compaction will be carried out. Waste may be flood grouted if required for disposal.

Plant Name: Future Low End Encapsulation Capability facilities.

Location: Sellafield.

Plant startup date: 2023

Total capacity (m³/y incoming waste): -

Target start date for packaging this stream: 2055

Throughput for this stream (m³/y incoming waste): -

Other information: LEEC treatment capability and capacity are currently under development.

WASTE STREAM**2D117****Miscellaneous Plants Initial/Interim Decommissioning:

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	Other(DCC)	~100.0	~0.51	2.1	165

Likely container type comment: DCC - external envelope of a Sellafeld 3 m³ box however it is made of fibre-reinforced concrete.

Range in container waste volume: The volume of raw waste in a container can vary from 5% to 65% by volume (Note a full container of dry sharp sand would be 50% by volume).

Other information on containers: Fiber reinforced concrete box.

Likely conditioning matrix: Not specified

Other information: -

Conditioned density (t/m³): ~1.0

Conditioned density comment: Conditioned waste density varies depending on waste loading.

Other information on conditioning: -

Opportunities for alternative disposal routing: Not yet determined

RADIOACTIVITY

Source: The main sources of activity are actinides and fission products.

Uncertainty: Waste within this waste stream is generated from a number of decommissioning projects which will commence at a future date. The uncertainties quoted for each nuclide represent both the uncertainty in quantification without detailed sampling and the likely variation of nuclide in different building consigned wastes under this waste stream. It is exceptionally unlikely that all the waste included in this waste stream will have the same variation in nuclide fingerprint. Also activity levels will depend on degree of decontamination achieved.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: -

Other information: Other alpha not specified. Other beta/gamma includes Zr95 1.74E-5 TBq/m³, Nb95 2.84E-5 TBq/m³ and Ru103 2.26E-6 TBq/m³. Other nuclides not specified.
