Range in container waste volume: -

Other information on containers: Stainless Steel

Likely conditioning matrix: BFS/OPC
Other information: A cement blend of BFS/OPC has been considered.

Conditioned density (t/m³): ~1.7
Conditioned density comment: Conditioned density is expected to be between 1.5t/m³ and 1.8t/m³

RADIOACTIVITY

Source: Activity is primarily activation products with small amounts of fission products.

Uncertainty: The range of uncertainty is wide, as much of the resin collected during early station operation is likely to be of low activity. Estimates of activity are based on theoretical assessments which assume higher levels of activity.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: -
