WASTE VOLUMES

		Reported
Stocks:	At 1.4.2019.....	0 m ³
Future arisings -	1.4.2019 - 31.3.2028.....	<102.0 m ³
Total future arisings:		102.0 m ³
Total waste volume:		102.0 m ³

Comment on volumes: It should be noted that the DSRL site programme is under review and that arisings dates are subject to change. Arisings rates are under review and are subject to change in line with site strategy. It should be noted that the site strategy for removal of soil is under revision and therefore future arisings will need to be reassessed. Volumes are based on limited sampling data.

Uncertainty factors on volumes:

Stock (upper):	x	Arisings (upper)	x 1.2
Stock (lower):	x	Arisings (lower)	x 0.8

WASTE SOURCE Contaminated soil which has arisen from accidental releases of activity from historical operations. The soil will be excavated during new build or site remediation operations.

PHYSICAL CHARACTERISTICS

General description: Mainly soil with smaller amounts of rubble. There are no large items to influence package choice.
 Physical components (%vol): Soil/rubble (100%).
 Sealed sources: The waste does not contain sealed sources.
 Bulk density (t/m³): 1.44
 Comment on density: The density figure is based on consignor's records.

CHEMICAL COMPOSITION

General description and components (%wt): The waste contains clay, silt, sand and stones together with some organic matter but is too variable to give breakdown data.
 Chemical state: Neutral
 Chemical form of radionuclides: Cl-36: Possibly present as general contamination.
 I-129: Possibly present as general contamination.
 Th: Possibly present as general contamination.
 U: Possibly present as discrete particles or general contamination.
 Pu: Possibly present as general contamination.
 Metals and alloys (%wt): Likely to be present as small pieces in soil.

PACKAGING AND CONDITIONING

Conditioning method: Contaminated soil which breaches the limits for LLW will most likely be encapsulated within 6m3 boxes for long term storage. However, this waste route is not finalised.
 Plant Name: TBC
 Location: Dounreay

Likely container type comment: Strategy being developed.

Range in container waste volume: Not yet estimated.

Other information on containers: -

Likely conditioning matrix: Cement

Other information: -

Conditioned density (t/m³): ~2.5

Conditioned density comment: The density is likely to be around 2 - 3 t/m³.

Other information on conditioning: -

Opportunities for alternative disposal routing: No

RADIOACTIVITY

Source: The source of the activity is accidental releases of a historic nature. The main radionuclides expected are Cs-137 and Sr-90.

Uncertainty: -

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: From Consignor's records of particles found on the foreshore.

Other information: -
