Comment on volumes: Building demolition programme due to commence in 2019. Slab removal will occur at end of this programme - volume estimates based on worst case - detailed characterisation may determine that some materials are out of scope and hence reduce the volume for disposal as contaminated waste. Volumes are estimated based on size of building slab. Detailed characterisation may determine that some of the material is out of scope and therefore reduce the volume of contaminated waste for disposal.

Uncertainty factors on volumes:

Stock (upper):	x	Arisings (upper)	x 1.0
Stock (lower):	x	Arisings (lower)	x 0.3

**WASTE SOURCE** Concrete from remediation of land where buildings have been demolished and the contaminated slab is to be removed.

**PHYSICAL CHARACTERISTICS**

General description: Concrete

Physical components (%wt): Concrete 100%

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m<sup>3</sup>): ~2.4

**TREATMENT, PACKAGING AND DISPOSAL**

Planned on-site / off-site treatment(s):

Treatment	On-site / Off site	Stream volume %
Low force compaction		
Supercompaction (HFC)		
Incineration		
Solidification		
Decontamination		
Metal treatment		
Size reduction		
Decay storage		
Recycling / reuse		
Other / various		
None	Off-site	100.0

Comment on planned treatments:

Waste will not be treated but detailed characterisation may allow some of the material to be redesignated "out of scope" and permit recycling / re-use of the material. Baseline assumption is 100% landfill disposal in soft sided packages (FIBC's)

**RADIOACTIVITY**

**WASTE STREAM****8A21****Contaminated Land - Concrete**

Source:	Contamination by uranium and daughters, with some technetium and neptunium.
Uncertainty:	Activity data estimated from existing characterisation data for similar materials. Actual activity will be measured during detailed characterisation programme and is expected to be less than values estimated.
Definition of total alpha and total beta/gamma:	Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.
Measurement of radioactivities:	Samples of similar materials have been analysed and this data used to estimate the specific activities.
