Comment on volumes: Waste arisings are assumed to occur at a uniform rate over 3 years. Final Dismantling & Site Clearance is assumed to commence in 2070 with reactor dismantling commencing in 2074 and lasting for 3 years. The volumes and radioactivity have been calculated for 85 years after reactor shutdown, i.e. 2074.

Uncertainty factors on volumes: Stock (upper): x Arisings (upper) x 1.2

RADIOACTIVITY

WASTE STREAM**9A315****Mild Steel (Non-Reactor) LLW**

Source:	Contamination and activation of the mild steel and its impurities.
Uncertainty:	The values quoted were derived by calculation from available data and are indicative of the activities that are to be expected.
Definition of total alpha and total beta/gamma:	Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.
Measurement of radioactivities:	The values used were derived by calculation from available measurements and are indicative of the activities to be expected.
Other information:	The activities quoted are those at 85 years after reactor shutdown, i.e. in 2074. There may be some contamination by Cs137.
