WASTE VOLUMES

		Reported
Stocks:	At 1.4.2019.....	~10.0 m ³
Total future arisings:		0 m ³
Total waste volume:		10.0 m ³

Comment on volumes: These components are not expected to arise during Care and Maintenance Preparation. This waste is assumed to be retained to Final Dismantling. Station operation ceased in March 1989.

Uncertainty factors on volumes:	Stock (upper):	x 1.2	Arisings (upper)	x

WASTE SOURCE Irradiated components removed from the reactors.

PHYSICAL CHARACTERISTICS

General description: Redundant or defective components such as chutes removed from reactor cores. Control rods are 8.5 m long x 50 mm diameter and weigh about 80 kg. Other items weigh about 1 to 1.5 t per item.

Physical components (%vol): Control rods, chutes, periscope and shield plug. Volume breakdown not assessed.

Sealed sources: -

Bulk density (t/m³): ~1

Comment on density: The bulk density of the waste ranges in value up to 7.5 t/m³. The minimum value has not been assessed. The average is probably about 1 t/m³.

CHEMICAL COMPOSITION

General description and components (%wt): The waste is principally steel components. Steel (~90%).

Chemical state: Neutral

Chemical form of radionuclides: H-3: Tritium may be incorporated in the waste or present as surface contamination in the form of inorganic or organic compounds.

C-14: Chemical form of carbon 14 has not been determined but may be graphite.

Cl-36: The chemical form of chlorine 36 has not been determined.

Tc-99: The chemical form of technetium has not been determined.

U: Chemical form of uranium isotopes has not been determined but may be uranium oxides.

Pu: Chemical form of plutonium isotopes has not been determined but may be plutonium oxides.

Metals and alloys (%wt): Nearly all of the waste is bulk metal. Dimensions have not been assessed.

PACKAGING AND CONDITIONING

Conditioning method: The waste is not expected to be supercompacted. The treatment envisaged is the placement of the waste in baskets followed by encapsulation in the container.

Plant Name: None

Location: Berkeley Site

Plant startup date: 2074

Total capacity
(m³/y incoming waste): ~5000.0

Target start date for
packaging this stream: 2074

Throughput for this stream
(m³/y incoming waste): ~2.0

Other information: Reactor demolition is assumed to start 3 years after the beginning of final decommissioning. The current proposal is to store the waste as at present until reactor dismantling. All waste is expected to be retrieved and conditioned when the conditioning campaign is undertaken.

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	4m box (no shielding)	100.0	16.2	18.9	< 1

WASTE STREAM**9A45****Miscellaneous Activated Components**

Likely container type comment: The waste is assumed to be in baskets in the waste package so the occupied volume in the package is greater than the original waste volume. Container choice may be influenced by Transport Regulations at the time of Final Site Clearance.

Range in container waste volume: Not yet determined.

Other information on containers: The container material is expected to be stainless steel.

Likely conditioning matrix: Blast Furnace Slag / Ordinary Portland Cement

Other information: The waste is assumed to be encapsulated.

Conditioned density (t/m³): ~3.0

Conditioned density comment: The conditioned waste density assumes that the waste will be encapsulated.

Other information on conditioning: The waste will be in baskets placed in the waste packages. Baskets of waste from different streams may be placed in the same container. The encapsulation would be likely to be BFS/OPC. The density of the encapsulated waste would probably be about 3 t/m³.

Opportunities for alternative disposal routing: No

RADIOACTIVITY

Source: Irradiated components removed from the reactor. Control rods are likely to be components of high activity.

Uncertainty: Specific activity is a function of Station operating history. The values quoted are indicative of the activities that might be expected.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: Estimates are based upon theoretical assessments.
