

WASTE STREAM**9A60****FED Magnox from Post Irradiation Examination**

SITE Berkeley

SITE OWNER Nuclear Decommissioning Authority

WASTE CUSTODIAN Magnox Limited

WASTE TYPE ILW

WASTE VOLUMES

		Reported
Stocks:	At 1.4.2019.....	0.7 m ³
Total future arisings:		0 m ³
Total waste volume:		0.7 m ³

Comment on volumes: There will be no further arisings of this waste stream. Some of the debris is in tins and for this debris the volume as contained in the tins is given. Most of the debris is loose and the quoted volume is three times the net volume for this waste.

Uncertainty factors on volumes:

Stock (upper):	x 1.1	Arisings (upper)	x
Stock (lower):	x 0.9	Arisings (lower)	x

WASTE SOURCE The waste arose from the programme of post irradiation examination of Magnox fuel elements that was undertaken within the research facilities previously on the site.

PHYSICAL CHARACTERISTICS

General description: The waste is predominantly made up of Magnox metal generated from the post irradiation examination work, although it could include other fuel element components. The largest arisings are believed to be splitter cages. There may be a significant quantity of Magnox fuel canning material contaminated by fuel in the debris. There will also be some Sintox discs, along with graphite, stainless steel and zirconium. The waste may be contaminated with Ternary Eutectic Chloride (TEC) (a fire extinguishant). There were three discharges of loose BTC FED and a posting of 68 mild steel paint tins. The loose waste will be processed with the BPS FED, as it is not possible to separate them. The waste containers will be processed with this waste stream. There are no large items that may require special handling.

Physical components (%wt): The vast majority of the FED from Berkeley Centre is Magnox (98%wt) together with possible small quantities of zirconium (1.6%wt), Sintox discs (sintered alumina) (0.1%wt), other components (Nimonic springs, graphite, stainless steel) (0.23%wt) and <<0.1%wt thermocouples. There will also be small amounts of mild steel from the containers, and there may be traces of Ternary Eutectic Chloride present.

Sealed sources: -

Bulk density (t/m³): 0.35

Comment on density: Density is calculated from the total mass of the loose waste, and the containerised waste (including the containers), and the volume.

CHEMICAL COMPOSITION

General description and components (%wt): The component breakdown of the FED from Berkeley Centre is 98%wt Magnox, 1.6%wt zirconium, 0.1%wt Sintox discs (sintered alumina), 0.23%wt other components (Nimonic springs, graphite, stainless steel) and <<0.1%wt thermocouples. There will also be small amounts of mild steel from the containers, and there may be traces of Ternary Eutectic Chloride present.

Chemical state: Alkali

Chemical form of radionuclides:

H-3: Tritium is expected to be present as surface contamination, possibly as water but perhaps in the form of other inorganic or organic compounds.

C-14: Carbon 14 will probably be present as graphite.

Cl-36: Chlorine 36 incorporated in the Magnox may be associated with barium impurity (barium chloride).

Se-79: The selenium content is insignificant.

Tc-99: The technetium content is insignificant.

Ra: Radium isotope content is insignificant.

Th: The thorium isotope content is insignificant.

U: Chemical form of U isotopes has not been determined but may be oxides.

Np: The neptunium content is insignificant.

Pu: Chemical form of plutonium isotopes has not been determined but may be plutonium oxides.

WASTE STREAM

9A60

FED Magnox from Post Irradiation Examination

Metals and alloys (%wt):

Bulk metal items are not expected to be present. Nearly all of the waste is expected to be only 1 or 2 mm thick.

Stainless steel..... <0.20

Other ferrous metals..... NE

Mild steel will be present as the waste container.

Iron.....

Aluminium.....

Beryllium..... ~0.30

Cobalt.....

Copper..... 0

Lead..... 0

Magnox/Magnesium..... 98.0

0.8 wt% of this is aluminium.

Nickel..... ~0.20

Nimonic.

Titanium.....

Uranium.....

Zinc..... TR

Zircaloy/Zirconium..... 1.6

Aluminium and zirconium are expected as alloying constituents of the Magnox.

Other metals..... TR

"Other" metals could include thermocouple wires.

Organics (%wt):

The loose waste is currently stored under the drums of ion exchange material in the vaults, which will have corroded to an extent. Therefore, it is likely to be contaminated with traces of spilt Lewatit DN, the organic ion exchange material.

Total cellulose..... 0

 Paper, cotton..... 0

 Wood..... 0

Halogenated plastics 0

Total non-halogenated plastics..... 0

 Condensation polymers..... 0

 Others..... 0

Organic ion exchange materials.... TR

Total rubber..... 0

 Halogenated rubber 0

 Non-halogenated rubber..... 0

Hydrocarbons.....

 Oil or grease 0

 Fuel.....

 Asphalt/Tarmac (cont.coal tar)...

 Asphalt/Tarmac (no coal tar)....

 Bitumen.....

 Others.....

Other organics..... TR

Other materials (%wt):

Traces of graphite may be present.

WASTE STREAM

Materials of interest for waste acceptance criteria:

Some of this material may be contaminated with the fire extinguishant powder, Ternary Eutectic Chloride (made up of Sodium chloride (20-35wt%, Potassium chloride (29-40wt%) and barium chloride (25-51wt%)). This may be of potential concern owing to the corrosive effect of sodium chloride on a waste package.

Combustible metals.....	98.0
Low flash point liquids.....	0

PACKAGING AND CONDITIONING

Conditioning method: This stream will be co-packaged with 9A25, 9A31, 9A39, 9A47, 9A52, and 9A66 in Type VI DCIC containers. Remainder of vault 1 waste streams will be co-packaged together in Concrete boxes (9A61, 9A62, 9A67, 9A32, 9A40, 9A48, 9A53, 9A73) Packages for vault 1 are assigned to 9A25, 9A32 & 9A73.

RADIOACTIVITY

Source: Activation when the associated fuel elements were irradiated, of nuclides incorporated in the Magnox and other materials, contamination by fission products and actinides during fuel element examination at Berkeley Technology Centre.

Uncertainty: The values quoted are indicative of the activities that might be expected.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

WASTE STREAM**9A60****FED Magnox from Post Irradiation Examination**Measurement of
radioactivities:Values were derived from measurements, calculations of induced activity and estimates of
likely contamination.
