WASTE STREAM**9E313****Mild Steel (Reactor) LLW****RADIOACTIVITY**

Source:	Activation of the mild steel and its impurities.
Uncertainty:	The values quoted were derived by calculation from available material specifications and are indicative of the activities that are to be expected. The major source of uncertainty is the impurity levels.
Definition of total alpha and total beta/gamma:	Total beta/gamma is defined as the sum of the listed activities of all nuclides other than alpha emitters. All alpha emitter activities are insignificant.
Measurement of radioactivities:	The specific activities were estimated from a neutron activation calculation of the steel material and its expected impurities.
Other information:	There may be some contamination by Cs137. The activities quoted are those at 85 years after reactor shutdown.
