WASTE SOURCE Ion Siv Cartridges used to remove Caesium from pond water.

PHYSICAL CHARACTERISTICS

General description: Spent IONSIV cartridges that formed part of the submersible caesium removal unit. Each cartridge will contain about 10 kg of water, less than 10% of this is expected to be free water, the rest is absorbed into the resin beads.

Physical components (%wt): Spent IONSIV Cartridges (100%). The waste is spent IONSIV cartridges, which are composed principally of a stainless steel hollow cylinder containing IONSIV material.

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): ~1.2

Comment on density: The density of 1.2 t/m³ assumes that each cartridge will contain 10 kg of water, giving a total mass of 66.2 kg for each cartridge.

CHEMICAL COMPOSITION

General description and components (%wt): IONSIV ion exchange material (~53%), stainless steel (~32%), water (~15%) and EPDM seal material (<1%). (EPDM is ethylene diene terpolymer). IonSiv is a crystalline silicotitanate.

Chemical state: Neutral

Chemical form of radionuclides:
H-3: Any tritium is likely to be present as water.
Cl-36: The chlorine 36 content is insignificant.
Pu: The chemical form of plutonium isotopes may be plutonium oxides.

Metals and alloys (%wt):

The stainless steel forms a hollow cylinder with dimensions: internal diameter 122mm, external diameter 296mm and height 640mm.	
Stainless steel.....	~32.0
The stainless steel is SS316L; nickel and chromium will be major constituents of the stainless steel cartridge housing.

RADIOACTIVITY

Source: Spent cartridges from the submersible caesium removal unit, used for the removal of caesium isotopes from cooling pond water. Contamination by fission products, actinides and activation products.

---------------------	----------------	--------------------------------

Uncertainty:	Specific activity is a function of Station operating history. The values quoted are indicative of the activities that might be expected.
Definition of total alpha and total beta/gamma:	Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.
Measurement of radioactivities:	Estimated from available data. Taken from WD-CALC-1923
Other information:	-
