WASTE SOURCE The waste will consist of porous concrete that will be broken out of the base of the South FED cells.**PHYSICAL CHARACTERISTICS**

General description: Porous concrete which formed the base of the FED (Fuel Element Debris) Cells which had therefore been in contact with dust and residual contaminated pond water which will have penetrated the concrete carrying dissolved and particulate contamination. There are no large items.

Physical components (%vol): Concrete 100%

Sealed sources: -

Bulk density (t/m³): 1.5

Comment on density: The density is as the concrete is expected to be broken out of the cells
