

WASTE STREAM	9J303	Mild Steel (Reactor) ILW
---------------------	--------------	---------------------------------

SITE Hunterston A

SITE OWNER Nuclear Decommissioning Authority

WASTE CUSTODIAN Magnox Limited

WASTE TYPE ILW

WASTE VOLUMES

		Reported
Stocks:	At 1.4.2019.....	0 m ³
Future arisings -	1.4.2072 - 31.3.2080.....	246.0 m ³
Total future arisings:		246.0 m ³
Total waste volume:		246.0 m ³

Comment on volumes: Waste arisings are assumed to occur at a uniform rate over 8 years. Final Dismantling & Site Clearance is assumed to commence in 2071 lasting for 9 years. Volumes and radioactivity have been calculated for 85 years after reactor shutdown.

Uncertainty factors on volumes: Stock (upper): x Arisings (upper) x 1.2
 Stock (lower): x Arisings (lower) x 0.8

WASTE SOURCE Mild steel items from the reactor structure.

PHYSICAL CHARACTERISTICS

General description: A variety of mild steel items.

Physical components (%wt): Mild steel items (100%).

Sealed sources: -

Bulk density (t/m³): ~1.4

Comment on density: The density is of the waste as cut for packaging.

CHEMICAL COMPOSITION

General description and components (%wt): Mild steel (100%).

Chemical state: Neutral

Chemical form of radionuclides: H-3: The tritium content is insignificant.
 C-14: The carbon 14 is incorporated in the steel, there also may be some contamination as graphite.
 Cl-36: The chlorine 36 is incorporated in the steel.
 Se-79: The selenium content is insignificant.
 Tc-99: The technetium content is insignificant.
 Ra: The radium content is insignificant.
 Th: The thorium content is insignificant.
 U: The uranium content is insignificant.
 Np: The neptunium content is insignificant.
 Pu: The plutonium content is insignificant.

Metals and alloys (%wt): All of the waste will be bulk metal items which will be cut for packaging. Metal thicknesses will probably range from a few mm to about 100 mm.

Stainless steel.....	0
Other ferrous metals.....	~100.0
Iron.....	
Aluminium.....	0
Beryllium.....	0
Cobalt.....	<0.02
Copper.....	0
Lead.....	0

Metals include HSS soft grade iron, PV steel, BS1501, BS15 and BS970.

Greatest measured value from the various components.

PACKAGING AND CONDITIONING

Conditioning method:	The waste is not expected to be supercompacted. It will be placed in baskets in the waste packages and encapsulated in 4m Stainless Steel ILW Boxes.
Plant Name:	None
Location:	Hunterston A Decommissioning Site.
Plant startup date:	2072
Total capacity (m ³ /y incoming waste):	~5000.0
Target start date for packaging this stream:	2072
Throughput for this stream (m ³ /y incoming waste):	~27.3
Other information:	The waste will be packaged immediately after the reactors are dismantled. It will be placed in basket and encapsulated. Basket of different ILW waste may be in the same package.

WASTE STREAM 9J303 Mild Steel (Reactor) ILW

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	4m box (no shielding)	100.0	~16.2	18.9	16

Likely container type comment: The waste is assumed to be in baskets in the waste package so the occupied volume in the package is greater than the original waste volume.

Range in container waste volume: Not yet determined. No significant variability is expected.

Other information on containers: The container material is expected to be stainless steel. Container choice may be influenced by Transport Regulations at the time of final site clearance.

Likely conditioning matrix: Blast Furnace Slag / Ordinary Portland Cement

Other information: The waste is to be encapsulated.

Conditioned density (t/m³): ~3.0

Conditioned density comment: The conditioned wastefrom density assumes that the waste will be encapsulated.

Other information on conditioning: The waste will be in baskets placed in the waste packages. Baskets of different Final Dismantling & Site Clearance ILW wastes may be in the same waste package. Should encapsulation not be required the density of the conditioned waste product would be about 1.2 t/m³. The volume of this stream is small and will not fill one box. Data have been presented as if the waste will be placed in a container with other ILW.

Opportunities for alternative disposal routing: No

Treatment	Stream volume (%)	Comment

RADIOACTIVITY

Source: Activation of the mild steel and impurities.

Uncertainty: The values quoted were derived by calculation from available material specification and are indicative of the activities that are expected. The major source of uncertainty is the impurity levels.

Definition of total alpha and total beta/gamma: Total beta/gamma is given as the sum of the listed activities of all nuclides other than alpha emitters.

Measurement of radioactivities: The specific activities were estimated from neutron activation calculations of the material and its impurities.

Other information: The activities quoted are those at 85 years after reactor shutdown, i.e. in 2072.
