WASTE VOLUMES**Reported**

Stocks:	At 1.4.2022.....	0 m ³
Future arisings -	1.4.2022 - 31.3.2023.....	0 m ³
	1.4.2023 - 31.3.2024.....	0 m ³
	1.4.2024 - 31.3.2025.....	0 m ³
	1.4.2025 - 31.3.2107.....	0 m ³
	1.4.2107 - 31.3.2111.....	~21.2 m ³

Total future arisings: 21.2 m³Total waste volume: 21.2 m³

Comment on volumes: For inventory purposes the arisings are assumed to arise at a uniform rate over four years. Final Dismantling & Site Clearance is assumed to commence in 2104, with reactor dismantling commencing in 2107, and lasting for ten years. Volumes and radioactivity have been calculated for 100 years after reactor shutdown, i.e. 2103, but the volume in this stream would not change for decommissioning in 2107.

Uncertainty factors on volumes: Stock (upper): x Arisings (upper) x 2.0
Stock (lower): x Arisings (lower) x 0.5**WASTE SOURCE** A variety of miscellaneous metallic wastes resulting from reactor dismantling.**PHYSICAL CHARACTERISTICS**

General description: Reactor components including control rods, zirconium thimble tubes, CGO thermocouples, core thermocouples and thermocouple ducts. Calder reactors have no channel sleeves or tie rods.

Physical components (%wt): Boron Steel control rods (~95%wt), zirconium thimble tubes (~5% wt). Calder reactors have no channel sleeves or tie rods.

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): 1

Comment on density: The density is of the waste as prepared for packaging.

CHEMICAL COMPOSITION

General description and components (%wt): Boron steel (~95%wt), zirconium (~5%wt), alumel (<1% wt) and chromel (<1%wt).

Chemical state: Neutral

Chemical form of radionuclides: H-3: The tritium content is insignificant.
C-14: The chemical form of carbon 14 has not been assessed but may be graphite.

Cl-36: The chlorine content is insignificant

Se-79: The selenium content is insignificant.

Tc-99: The chemical form of technetium has not been determined.

I-129: The iodine content is insignificant

Ra: The radium content is insignificant.

Th: The thorium content is insignificant.

U: The uranium content is insignificant.

Np: The neptunium content is insignificant.

Pu: The plutonium content is insignificant.

Metals and alloys (%wt): -

Potential for the waste to contain discrete items: Yes. "Large" fabricated steel items.

PACKAGING AND CONDITIONING

Conditioning method: The exact method of waste conditioning has not yet been established.

Plant Name: Not yet established.

Location: -

Plant startup date: -

Total capacity (m³/y incoming waste): -

Target start date for packaging this stream: 2107

Throughput for this stream (m³/y incoming waste): -

Other information: -

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	Sellafield 3m ³ box	100.0	1.33	2.8	16

Likely container type comment: -

Range in container waste volume: Waste loading estimated based on the total volume of Calder Hall FSC wastes (2A310, 2A311, 2A312 & 2A313) being packaged into 3,300 Sellafield 3m3 boxes.

Other information on containers: The packaged waste will be in a form suitable for disposal at a GDF.

Likely conditioning matrix:

Other information:

Conditioned density (t/m³): -

Conditioned density comment:

Other information on conditioning:

Opportunities for alternative disposal routing: Not yet determined

RADIOACTIVITY

Source:	Activation of the materials and impurities. There may be some contamination.
Uncertainty:	The values quoted were derived by calculation from available material specification and are indicative of the activities that are expected. The major source of uncertainty is the impurity levels.
Definition of total alpha and total beta/gamma:	All alpha emitters activities are insignificant and the total is therefore given as <1E-9 TBq/m ³ . An estimate of total beta/gamma activity is provided, individual nuclide activities have not been quantified.
Measurement of radioactivities:	The specific activities have been estimated using a neutron activation calculation using available material specifications. The major source of uncertainty is the impurity levels.
Other information:	There may be some contamination by Cs137. The activities quoted are those at 100 years after reactor shutdown, i.e. in 2103.
