RADIOACTIVITY

Source: Contamination of materials.

Uncertainty: Activity values are current best estimates. The values are the maximum that may be present although they are indicative only of the activities that would be expected.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: The specific activities have been estimated from the equivalent operational waste stream ie 2C12 Ponds LLW.
