Total future arisings:	5014.0 m <sup>3</sup>
Total waste volume:	5014.0 m <sup>3</sup>

Comment on volumes:

Arisings are in line with current decommissioning programmes and strategy. Waste within this waste stream is generated from decommissioning projects which will commence at a future date. As a result of this, minimal characterisation of waste volumes and fingerprints has been carried out and hence there is a large uncertainty in the potential arisings. Preliminary assessments indicate that the volumes may vary from -30% to +200% for ILW.

Uncertainty factors on  
volumes:

Stock (upper):	x	Arisings (upper) x 3.0
Stock (lower):	x	Arisings (lower) x 0.7

#### **WASTE SOURCE**

Dismantling of reprocessing & associated plants, waste storage and treatment plants & site services facilities.

#### **PHYSICAL CHARACTERISTICS**

General description: Plant and equipment, internal building fabric and miscellaneous soft waste, i.e. rubber/PVC/paper. Most items size reduced in-situ. Some large items may be present.

Physical components (%vol): Vessels and tanks (42%), Concrete, brick and blockwork (25%), Structural Steel (4%), gloveboxes (2%), pipework, valves and fittings (7%), plant and equipment (7%), ducting (2%), Reinforcing steelwork (2%), soft waste (9%).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m<sup>3</sup>): ~0.35

Comment on density: Density stated is average for PCM.

#### **CHEMICAL COMPOSITION**

General description and  
components (%wt): Stainless steel (50.4%), Brick & concrete (30%), mild steel (12.6%), copper (0.2%), aluminium (<0.1%), zinc (<0.1%), plastic (4%), rubber (1.9%), cellulose (0.6%), glass (0.1%). Percentages are by volume.

**WASTE STREAM****2D130****Miscellaneous Plants Initial/Interim Decommissioning:

Potential for the waste to contain discrete items: Yes. Sealed non compactable drums, final ILW packages and some large identifiable components

**PACKAGING AND CONDITIONING**

Conditioning method: The waste is assumed to leave decommissioning in 200 litre mild steel drums. Where possible these drums will be supercompacted. Pucks generated and any non-compactable drums will be loaded into 500 litre product drums.

Plant Name: Waste Treatment Complex (WTC) 2 and 3

Location: Sellafield.

Plant startup date: 2034

Total capacity  
(m<sup>3</sup>/y incoming waste): -

Target start date for packaging this stream: 2032

Throughput for this stream  
(m<sup>3</sup>/y incoming waste): -

Other information: WTC 1 due to operate until April 2035 just prior to this stream starting. WTC2 begins operations in 2034 - waste generated in the interim period is planned to be interim stored in 200 l drums.

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m <sup>3</sup> )	Payload (m <sup>3</sup> )	Number of packages
	500 l drum (basket for waste)	100.0	~0.239	~0.504	20980

Likely container type comment: Conditioning and packaging factors assume the current average of 6 feed drums being compacted per product drum.

Range in container waste volume: Between 1 and 9 compacted 200l drums will be put into a 500l drum.

Other information on containers: Stainless Steel

Likely conditioning matrix: Pulverised fuel ash/Ordinary Portland cement mixture

Other information: -

Conditioned density (t/m<sup>3</sup>): 2.0Conditioned density comment: The density of the conditioned product will range from 1.5 to 2.6 t/m<sup>3</sup> for drums.

Other information on conditioning: -

Opportunities for alternative disposal routing: Yes

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment
Disposal at a Geological Disposal Facility	Disposal at LLWR	20.0	2029	Medium	There is potential for up to 20% of the waste to be diverted to LLWR.

**RADIOACTIVITY**

Source: The main sources of activity are plutonium isotopes.

Uncertainty: Waste within this waste stream is generated from decommissioning projects which will commence at a future date. The uncertainties quoted for each nuclide represent both the uncertainty in quantification without detailed sampling and the likely variation of nuclide in different building consigned wastes under this waste stream. It is exceptionally unlikely that all the waste included in this waste stream will have the same variation in nuclide fingerprint. Also activity levels will depend on degree of decontamination achieved.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities:

-

Other information:

-
