	1.4.2107 - 31.3.2110.....	~78.0 m ³
1.4.2110 - 31.3.2120.....	~0 m ³	
Total future arisings:		249.0 m ³
Total waste volume:		249.0 m ³

Comment on volumes: Future arisings are expected to begin in 2052 and continue intermittently until 2110. Waste within this waste stream is generated from a number of decommissioning projects which will commence at a future date. As a result of this, minimal characterisation of waste volumes and fingerprints has been carried out and hence there is a large uncertainty in the potential arisings. Preliminary assessments indicate that the volumes may vary from -30% to +200% for ILW.

Uncertainty factors on volumes: Stock (upper): x Arisings (upper) x 3.0
 Stock (lower): x Arisings (lower) x 0.7

WASTE SOURCE Final decommissioning of spent fuel storage ponds and associated facilities.

PHYSICAL CHARACTERISTICS

General description: Building structural materials - surface scabblings. None anticipated (fines only).
 Physical components (%vol): Concrete (100%).
 Sealed sources: The waste does not contain sealed sources.
 Bulk density (t/m³): ~1
 Comment on density: Density stated is average for ILW final decommissioning.

CHEMICAL COMPOSITION

General description and components (%wt): Concrete (100%).
 Chemical state: Alkali
 Chemical form of radionuclides: Cl-36: Not expected to be present in significant quantity.
 Se-79: Not expected to be present in significant quantity.
 Tc-99: Not expected to be present in significant quantity.
 I-129: Not expected to be present in significant quantity.
 Ra: Not expected to be present in significant quantity.
 Th: Not expected to be present in significant quantity.
 U: Not expected to be present in significant quantity.
 Metals and alloys (%wt): -

Potential for the waste to contain discrete items: Yes. Minor tools may be present in this waste stream.

PACKAGING AND CONDITIONING

Conditioning method: The waste will be subject to in-situ size reduction prior to placing in one of the following options, a 3 m³ Decommissioning Concrete Container (DCC), a Magnox type (round cornered) 3 m³ box or a Sellafield 3 m³ box liner. No further size reduction or compaction will be carried out. Waste containers may be flood grouted if required for disposal.

Plant Name: Box Encapsulation Plant, Low End Encapsulation Capability and future replacement facilities, Final ILW Encapsulation plant.

Location: Sellafield.

Plant startup date: BEP 2022, LEEC 2023, FILWEP 2060.

Total capacity (m³/y incoming waste): -

Target start date for packaging this stream: 2052

Throughput for this stream (m³/y incoming waste): -

Other information: LEEC treatment capability and capacity are currently under development. Use of BEP is dependent on spare operating capacity being released from High hazard and risk reduction priorities.

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	3m ³ box (round corners)	~6.0	~1.13	~2.8	14
	Sellafield 3m ³ box	~55.0	~0.87	~2.1	158
	Other(DCC)	~39.0	~0.85	~2.1	115

Likely container type comment: DCC - external envelope of a Sellafield 3 m³ box however it is made of fiber reinforced concrete.

Range in container waste volume: The volume of raw demolition waste in a container can vary from 20% to 65% by volume (Note a full container of dry sharp sand would be 50% by volume).

Other information on containers: Sellafield 3m³ box and decommissioning liner used to load boxes. Fibre reinforced concrete for DCC, 3m³ box (round corners) is only used for late arisings in this waste stream.

Likely conditioning matrix: Not specified

Other information: -

Conditioned density (t/m³): NE

Conditioned density comment: Conditioned waste density varies depending on waste loading.

Other information on conditioning: -

WASTE STREAM**2D136****Miscellaneous Plants Final Decommissioning: Ponds**

Opportunities for alternative disposal routing: Not yet determined

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment

RADIOACTIVITY

Source:	The main sources of activity are actinides and fission products.
Uncertainty:	Waste within this waste stream is generated from a number of decommissioning projects which will commence at a future date. The uncertainties quoted for each nuclide represent both the uncertainty in quantification without detailed sampling and the likely variation of nuclide in different building consigned wastes under this waste stream. It is exceptionally unlikely that all the waste included in this waste stream will have the same variation in nuclide fingerprint. Also activity levels will depend on degree of decontamination achieved.
Definition of total alpha and total beta/gamma:	Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.
Measurement of radioactivities:	-
Other information:	Other beta/gamma includes S35 1.23E-10 TBq/m ³ , Zr95 8.41E-6 TBq/m ³ , Nb95 4.66E-5 TBq/m ³ and Ru103 1.63E-5 TBq/m ³ . Nuclides making up remaining "other beta/gamma" not specified.
