PACKAGING AND CONDITIONING

Container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	500 l drum	100.0	0.472	0.472	1350

Container type comment: Conditioning factor is 1, packaging factor is 1.21.

Range in container waste volume: -

Other information on containers: Stainless steel drum with indrum mixing paddle. Drum is fitted with a lid that contains a filter.

Conditioned density (t/m³): 1.95

Conditioned density comment: -

Other information on conditioning: Waste is already conditioned.

RADIOACTIVITY

Source: The waste will be residue from C-14 scrubbers. Consequently, C-14 will be dominant, although there will be fission products present associated with some fuel carry-over. For MEB crud, the main source will be Co-60 activation product in steel corrosion product.

Uncertainty: -

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: The activities are a combination of measurements and calculated activities, based on characteristics of fuel reprocessed to date for stocks and that still to be reprocessed for arisings.
