TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off site	Stream volume %
Low force compaction	On-site	4.1
Supercompaction (HFC)		
Incineration	Off-site	49.7
Solidification	Off-site	31.5
Decontamination		
Metal treatment		
Size reduction		
Decay storage		
Recycling / reuse		
Other / various		
None		14.7

Comment on planned treatments:

All high force compaction takes place in WAMAC. For Inventory purposes, it is assumed that supercompaction will continue after the closure of WAMAC in 2028. Waste not requiring treatment is direct disposal to LLWR.

Waste Planned for Disposal at the LLW Repository:

Container voidage: -

Waste Characterisation Form (WCH): The waste meets the LLWR's Waste Acceptance Criteria (WAC). The waste has a current WCH. Differences exist between Inventory information and current WCH. Materials and radioactivity data has been taken from the current WCH, but data on waste volumes and waste routes is based on the Waste Forecasting database as this information is more recent.

Waste consigned for disposal to LLWR in year of generation: Yes.

Non-Containerised Waste for In-Vault Grouting: (Not applicable to this waste stream)

RADIOACTIVITY

Source: The activity originates from LWR fuel stored in the pond. The waste becomes contaminated as a result of routine operations and maintenance.

Uncertainty: The uncertainty associated with the fingerprinting analysis is likely to be low, however the

WASTE STREAM**2X29****Solid LLW from LWR Storage Pond**

	volumes and total activity information (and possibly some other assumptions) are likely to be more notional and thus more uncertain.
Definition of total alpha and total beta/gamma:	Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.
Measurement of radioactivities:	Specific activity data is based on data in the corresponding WCH, which in turn maps an estimated total activity to an analytically derived radionuclide fingerprint.
Other information:	The radionuclides have been taken from REM_TP_0116A and are based on the current WCH.
