| Total waste volume: | | 86.2 m ³ |

Comment on volumes: Arisings are sourced from REM_TP_0116A and are based on the latest five-year forecasts

from the Waste Forecasting database. The overall timescale for waste arising are informed

x 1.5

Reported

by the Sellafield Site Master Timeline. Uncertainty information is notional.

Uncertainty factors on Stock (upper): x Arisings (upper)

volumes: Stock (lower): x Arisings (lower) x 0.5

WASTE SOURCE The waste arises as a result of routine operations and maintenance in the AGR storage

pond.

PHYSICAL CHARACTERISTICS

General description: The waste will mainly consist of secondary wastes and also metallic items associated with

redundant plant items. The waste has not undergone any change since it was generated.

Physical components (%wt): Metals (45.3%), Concrete/Rubble (17.8%), Soil (3%), Wood (1%), Rubber (1%),

Halogenated Plastics (8.7%), Non-Halogenated Plastics (12%), Hydrocarbons (1.5%),

Other Organics (9%), Asbestos (0.5%) and Other (0.2%).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): 0.377

Comment on density: The total bulk density is derived from REM_TP_0116A and is based on lifetime mass and

volume.

CHEMICAL COMPOSITION

General description and

components (%wt):

Metals (45.3%), Concrete/Rubble (17.8%), Soil (3%), Wood (1%), Rubber (1%), Halogenated Plastics (8.7%), Non-Halogenated Plastics (12%), Hydrocarbons (1.5%),

Other Organics (9%), Asbestos (0.5%) and Other (0.2%).

Chemical state: Neutral

Chemical form of radionuclides:

_

| TREATMENT, PACKAGING | AND DISPOSAL | | | |
| Planned on-site / off-site treatment(s): | Treatment | | On-site Off sit | |
| | Low force compac | ction | | |
| | Supercompaction | (HFC) | On-si | ite 8.0 |
| | Incineration | | Off-si | ite 71.7 |

Comment on planned treatments:

All high force compaction takes place in WAMAC. For Inventory purposes, it is assumed that supercompaction will continue after the closure of WAMAC in 2028. Waste not requiring treatment is direct disposal to LLWR.

Off-site

Other information:

Waste Planned for Disposal at the LLW Repository:

Container voidage: -

Waste Characterisation Form (WCH):

The waste meets the LLWR's Waste Acceptance Criteria (WAC).

The waste has a current WCH.

Differences exist between Inventory information and current WCH.

Materials and radioactivity data have been taken from the current WCH, but data on waste volumes and waste routes are based on the Waste Forecasting database as

this information is more recent.

Waste consigned for disposal to LLWR in year of generation:

Yes.

Non-Containerised Waste for In-Vault Grouting: (Not applicable to this waste stream)

Stream volume (%):

Waste stream variation: -

Bounding cuboidal volume:

Inaccessible voidage: -

Other information: -

RADIOACTIVITY

Source: The activity originates from AGR fuel stored in the pond. The waste becomes

contaminated as a result of routine operations and maintenance.

Uncertainty: The uncertainty associated with the fingerprinting analysis is likely to be low, however the

volumes and total activity information (and possibly some other assumptions) are likely to

be more notional and thus more uncertain.

Definition of total alpha and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities:

Specific activity data is based on data in the corresponding WCH, which in turn maps an

estimated total activity to an analytically derived radionuclide fingerprint.

Other information: The radionuclides have been taken from REM_TP_0116A and are based on the current

WCH (LLWR Ref: 1S-1S-0-WCH-0-4672 Version 8).
