WASTE TYPE LLW

Is the waste subject to Scottish Policy: No

WASTE VOLUMES

		Reported
Stocks:	At 1.4.2022.....	~~5.1 m ³
Future arisings -	1.4.2022 - 31.3.2070.....	~~5.1 m ³
Total future arisings:		5.1 m ³
Total waste volume:		10.1 m ³

Comment on volumes: The actual volumes of many of these wastes will only be known when they have been retrieved and characterised. The waste is problematic and/or orphan meaning there is no defined waste route therefore future arisings cannot be accurately predicted as waste routes may arise or more problematic and orphan waste may be found. It has been assumed that these wastes will arise on an irregular basis up to 2070.

Uncertainty factors on volumes: Stock (upper): x 1.5 Arisings (upper) x 3.0
 Stock (lower): x 0.67 Arisings (lower) x 0.33

WASTE SOURCE

A collection of a number of mainly small volume heterogeneous wastes that arise from a wide range of operational and research activities. The waste is problematic or orphan meaning there is no defined waste route. Waste arisings from a number of facilities both operational and undergoing Post Operational Clean Out/ Decommissioning.

PHYSICAL CHARACTERISTICS

General description: The waste is made up of a range of components including resins and miscellaneous chemicals. Some of the wastes may have degraded during storage.

Physical components (%vol): -

Sealed sources: Not yet determined. Problematic and Orphan Sources population identified as a sub category of the total source populations. Source data is not recorded on this sheet to avoid double counting.

Bulk density (t/m³): NE

Comment on density: The mean bulk density will vary from waste to waste.
