PACKAGING AND CONDITIONING

Conditioning method: The waste will be conditioned to satisfy the disposal requirements which are effective at the time of retrieval/conditioning. It is currently assumed that the waste will be placed in "baskets" in the waste packages and will be encapsulated.

Plant Name: None.

WASTE STREAM**3J09****Miscellaneous Activated Components - Debris Vault 3**

Location: Dungeness B Power Station.
 Plant startup date: 85 Years After Reactor Shutdown
 Total capacity (m³/y incoming waste): -
 Target start date for packaging this stream: -
 Throughput for this stream (m³/y incoming waste): -

Other information: All of the waste is expected to be retrieved and conditioned when a conditioning campaign is undertaken. The total plant process rate is between 500m³/y and 5000m³/y.

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	4m box (100mm concrete shielding)	100.0	~12.2	~14.3	< 1

Likely container type comment: -

Range in container waste volume: -

Other information on containers: Stainless Steel.

Likely conditioning matrix: BFS/OPC

Other information: -

Conditioned density (t/m³): ~3.0

Conditioned density comment: The density of the encapsulated waste is expected to be approximately 3 t/m³.

Other information on conditioning: Waste will be retained on site pending Final Site Clearance, to let nuclides such as Co-60 undergo considerable radioactive decay. Baskets of different Final Site Clearance ILW wastes may be in the same waste package.

Opportunities for alternative disposal routing: No

RADIOACTIVITY

Source: Irradiated components removed from the reactor. Activated material removed from the reactor core is likely to be of high specific activity.

Uncertainty: Specific activity is a function of station operating history. The values quoted are indicative of the activities that might be expected.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: Estimates are based on theoretical assessments.

Other information: Estimates are based upon theoretical assessments. Other beta/gamma nuclides of arisings and stocks (in TBq/m³) include Cr51 (4E+02, 3E-01); Co58 (1E+02, 1E+0); Nb95 (3E-01, 7E-04) and Ru103 (2E-04, 6E-07). Other beta/gamma nuclides will also include Fe59.
