

<b>WASTE STREAM</b>	<b>3K16</b>	<b>Wet Fuel Route LLW</b>
---------------------	-------------	---------------------------

**SITE** Hartlepool

**SITE OWNER** EDFE NGL

**WASTE CUSTODIAN** EDFE NGL

**WASTE TYPE** LLW

Is the waste subject to Scottish Policy: No

**WASTE VOLUMES**

		Reported
Stocks:	At 1.4.2022.....	7.5 m <sup>3</sup>
Future arisings -	1.4.2022 - 31.3.2024.....	53.0 m <sup>3</sup>
	1.4.2024 - 31.3.2026.....	53.0 m <sup>3</sup>
	1.4.2026 - 31.3.2027.....	32.0 m <sup>3</sup>
	1.4.2027 - 31.3.2028.....	58.0 m <sup>3</sup>
	1.4.2028 - 31.3.2029.....	63.0 m <sup>3</sup>
	1.4.2029 - 31.3.2032.....	8.7 m <sup>3</sup>
	1.4.2032 - 31.3.2033.....	8.0 m <sup>3</sup>
	1.4.2033 - 31.3.2034.....	1.0 m <sup>3</sup>
Total future arisings:		276.7 m <sup>3</sup>
Total waste volume:		284.2 m <sup>3</sup>

Comment on volumes: Waste volumes will be variable depending on station operating conditions.

Uncertainty factors on volumes: Stock (upper): x 1.25 Arisings (upper) x 1.5  
 Stock (lower): x 0.75 Arisings (lower) x 0.5

**WASTE SOURCE** General solid LLW arising from wet fuel route areas. Solid waste arises mainly from maintenance and refurbishment work, and may include: items which have been contaminated in operation, materials that have been used to prevent spread of contamination along with sampling and cleaning equipment.

**PHYSICAL CHARACTERISTICS**

General description: Irradiated materials may be generated but these are expected to be small in volume. The waste consists of mixed materials such as metal items, spent filters, redundant plant items, cabling, soft waste (e.g. broken/damaged clothing, paper cardboard, cloth etc), floor coverings, heavy duty plastic and rubber waste. Concrete/rubble, wood and powders and organic/ inorganic ion exchange materials may also be generated. The site does undertake volume reduction by low force compaction and shredding, this is principally to incinerable waste. Any free liquids present will be removed as far as practicable during the sorting process.

Physical components (%wt): Metal (62%), biodegradable-non putrescibles (10%) Concrete/Rubble (3%), Plastic/Rubber (20%), Wood (1%), powders/ash (1%), other organic (2%) and other materials such as man made fibres and glass fibre (1%)

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m<sup>3</sup>): ~0.3

Comment on density: Density based on raw volume and weight at arising as provided in WCH.

**CHEMICAL COMPOSITION**

General description and components (%wt): Stainless Steel (~11%), Mild Steel (~44%), Iron (~2%) Aluminium (~1%), Copper (~3%), Chromium metal/alloy (~1%), Biodegradable-non putrescibles (10%) Concrete/Rubble (3%), Plastic/Rubber (20%), Wood (1%), powders/ash (1%), Others (~2%) and other materials such as man made fibres and glass fibre (1%)

Chemical state: Neutral

Chemical form of radionuclides: H-3: Not yet determined  
 C-14: Not yet determined  
 Cl-36: Not yet determined  
 Se-79: Not yet determined  
 Tc-99: Not yet determined  
 I-129: Not yet determined  
 Ra: Not yet determined

**WASTE STREAM**

**3K16**

**Wet Fuel Route LLW**

Th: Not yet determined  
 U: Not yet determined  
 Np: Not yet determined  
 Pu: Not yet determined

Metals and alloys (%wt): This waste stream is variable and may contain some bulk items which will be volume reduced by cutting, proportion of bulk items unknown.

	(%wt)	Type(s) / Grade(s) with proportions	% of total C14 activity
Stainless steel.....	~11.0	metallic plant items/equipment	
Other ferrous metals.....	~44.0	mild steel	
Iron.....	~2.0	metallic plant items/equipment	
Aluminium.....	~1.00	metallic plant items/equipment

Complexing agents (%wt):      Not yet determined

	(%wt)	Type(s) and comment
EDTA.....	NE	
DPTA.....	NE	
NTA.....	NE	
Polycarboxylic acids.....	NE	
Other organic complexants.....	~0.20	Decon 90
Total complexing agents.....	NE	

Potential for the waste to contain discrete items:      Yes.

**TREATMENT, PACKAGING AND DISPOSAL**

Planned on-site / off-site treatment(s):	Treatment	On-site / Off site	Stream volume %
	Low force compaction		
	Supercompaction (HFC)	Off-site	~3.0
	Incineration	Off-site	~31.0
	Solidification		
	Decontamination		
	Metal treatment	Off-Site	~55.0
	Size reduction		
	Decay storage		
	Recycling / reuse		
	Other / various		
	None	Off-site	~11.0

Comment on planned treatments:      In line with the waste hierarchy, wastes will be treated preferentially by incineration, metal decontamination/melting, supercompaction, optimal packaging in HHISOs or immobilisation by encapsulation where necessary, prior to ultimate disposal at the LLW Repository. These treatments will be carried out off-site under contract with companies such as LLWR Ltd, Cyclife, Tradebe Inutec.

Disposal Routes:	Disposal Route	Stream volume %	Disposal density t/m3
	Expected to be consigned to the LLW Repository	~14.0	
	Expected to be consigned to a Landfill Facility		
	Expected to be consigned to an On-Site Disposal Facility		
	Expected to be consigned to an Incineration Facility	~31.0	
	Expected to be consigned to a Metal Treatment Facility	~55.0	
	Expected to be consigned as Out of Scope		
	Expected to be recycled / reused		
	Disposal route not known		

Classification codes for waste expected to be consigned to a landfill facility:      -

**Upcoming (2022/23-2024/25) Waste Routing (if expected to change from above):**

**WASTE STREAM      3K16      Wet Fuel Route LLW**

Disposal Route	Stream volume %		
	2022/23	2023/24	2024/25
Expected to be consigned to the LLW Repository			
Expected to be consigned to a Landfill Facility			
Expected to be consigned to an On-Site Disposal Facility			
Expected to be consigned to an Incineration Facility			
Expected to be consigned to a Metal Treatment Facility			
Expected to be consigned as Out of Scope			
Expected to be recycled / reused			
Disposal route not known			

**Opportunities for alternative disposal routing:**      -

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment
-	-	-	-	-	-

**Waste Packaging for Disposal:**

Container	Stream volume %	Waste loading m <sup>3</sup>	Number of packages
1/3 Height IP-1 ISO	~14.0	~21.8	2
2/3 Height IP-2 ISO			
1/2 Height WAMAC IP-2 ISO			
1/2 Height IP-2 Disposal/Re-usable ISO			
2m box (no shielding)			
4m box (no shielding)			
Other			

Other information:      Waste loading is representative of the raw waste following further planned treatments. Supercompaction assumed to reduce volume to 20% of original. Solidification assumed to increase volume to 300% of original. No treatment results in the same volume.

**Waste Planned for Disposal at the LLW Repository:**

Container voidage:      -

Waste Characterisation Form (WCH):      The waste meets the LLWR's Waste Acceptance Criteria (WAC). The waste has a current WCH. Inventory information is consistent with the current WCH.

Waste consigned for disposal to LLWR in year of generation:      No. Efforts are made to dispose of waste during year of arising, but this is dependent on rate of arising throughout the year. This is also dependent on consignment of waste to third parties.

**Non-Containerised Waste for In-Vault Grouting:**      (Not applicable to this waste stream)

Stream volume (%):      -

Waste stream variation:      -

Bounding cuboidal volume:

Inaccessible voidage:      -

Other information:      -

**RADIOACTIVITY**

Source:      Contamination will be main source of activity with possibly some activation of certain

**WASTE STREAM****3K16****Wet Fuel Route LLW**

Uncertainty:	reactor or fuel route components. The total given in the WCH is pessimistic, but not considered overly conservative. The waste for this stream is operational and on-going therefore the waste is variable. Fingerprint has been based over the last three years, so there is uncertainty about future arisings.
Definition of total alpha and total beta/gamma:	Where totals are shown on the table of radionuclide activities they are the sums of the listed beta/gamma emitting radionuclides plus 'other beta/gamma' not listed on the datasheet.
Measurement of radioactivities:	Estimated based on arisings and data in WCH. The total activity has been estimated by applying the fingerprint for the date of arisings. For consignments this will be decayed, but the decay time will vary depending on the storage time for the waste.
Other information:	-
