Scottish Policy:

No

WASTE VOLUMES

Reported

Stocks: At 1.4.2022..... ~0.6 m³Future arisings - 1.4.2022 - 31.3.2024..... ~0.2 m³1.4.2024 - 31.3.2028..... ~0.4 m³Total future arisings: 0.6 m³Total waste volume: 1.2 m³

Comment on volumes: Arising rate of 0.1m3/year conservatively assumed for operational period plus four years of defueling.

Uncertainty factors on
volumes: Stock (upper): x 1.75 Arisings (upper) x 1.75
Stock (lower): x 0.25 Arisings (lower) x 0.25**WASTE SOURCE** Two main sources: (1) Carbon deposition onto internal reactor surfaces; and (2) Superficial damage to graphite fuel sleeves.**PHYSICAL CHARACTERISTICS**

General description: Two sources give rise to two different waste populations: (1) Finer dust-like debris expected to have arisen from fuel assembly carbon deposition that has subsequently been washed into the ponds; and (2) Larger graphite fragments understood to have fragmented from graphite fuel sleeves during the discharge of irradiated fuel elements into the ponds.

Physical components (%vol): Not yet determined

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): NEComment on density: Bulk density not yet determined. Bulk density of 1t/m³ assumed to convert specific activities (measured in units Bq/g by radiochemical analysis) to units TBq/m³.**CHEMICAL COMPOSITION**General description and
components (%wt): Not yet determined

Chemical state: -

Chemical form of
radionuclides: H-3: Not yet determined

RADIOACTIVITY

Source: Metal activation and nuclear fission products.

Uncertainty: Specific activity data was available for a total of five samples from three different areas of the cooling ponds. The average specific activity of these five samples was determined by weighting the volume of waste present in each area of the cooling ponds. There is high uncertainty in specific activity data due to the small number of samples that have been retrieved to date and the range of specific activities presented by them.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

WASTE STREAM**3K32****WET (POND) CARBONACEOUS DEBRIS**

Measurement of
radioactivities:

Measured by radiochemical analysis.

Other information:

-
