Comment on volumes:	Waste volumes will be variable depending on station operating conditions. Volumes based on Back to Bio Shield strategy. Work is ongoing looking at optimising the strategy which could lead to a change in volume and timings of arisings across Final Site Clearance wastes (300s) and Pre C&M wastes (100s), in future submissions.
Uncertainty factors on volumes:	Stock (upper): x Arisings (upper) x 1.5 Stock (lower): x Arisings (lower) x 0.5

WASTE SOURCE

Wastes arising from contamination control procedures during plant dismantling.

PHYSICAL CHARACTERISTICS

General description:	A variety of combustible and non combustible materials. No large items are present in the waste.
Physical components (%vol):	The waste is expected to contain metallic items (~80% vol), plastic items (~4%vol), cloth items (<1% vol). Other organics include incenerator ash (~15%). Percentages of constituents are very uncertain.
Sealed sources:	The waste does not contain sealed sources.
Bulk density (t/m ³):	~1
Comment on density:	The density is likely to lie between 0.5 and 1.5 t/m ³ .

CHEMICAL COMPOSITION

General description and components (%wt):	The waste is expected to contain metallic items (~80% vol), plastic items (~4%vol), cloth items (<1% vol). Other organics include incenerator ash (~15%). Percentages of constituents are very uncertain.
Chemical state:	-
Chemical form of radionuclides:	H-3: Diffused into materials C-14: There may be some surface contamination as graphite. Cl-36: Not Determined Se-79: Selenium content not expected to be significant Tc-99: Not determined I-129: Not determined Ra: Radium content is insignificant Th: Thorium content is Insignificant U: Not determined Np: The neptunium content is insignificant Pu: Not determined
Metals and alloys (%wt):	Metal thicknesses will probably be typically 1-3 mm.

TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off site	Stream volume %
Low force compaction		
Supercompaction (HFC)	Off-site	~15.0
Incineration	Off-site	~5.0
Solidification		
Decontamination		
Metal treatment	Off-site	~64.0
Size reduction		
Decay storage		
Recycling / reuse		
Other / various		
None		~16.0

Comment on planned treatments:

Incinerator ash will be supercompacted. Approximately 80% of the metal waste is assumed to be recyclable with 95% suitable for re-use. Waste will be grouted into containers if necessary. Supercompaction assumes x5 volume reduction. Incineration assumes 99% volume reduction.

Disposal Routes:

RADIOACTIVITY

Source: Contamination by activation products from the reactor structure.

Uncertainty: Only very approximate estimates have been made of the total specific activities. Based on decay corrected operational wastestream data.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: Activation/decay calculations based on operational waste streams and projected operating history.

Other information: No nuclides other than those listed are expected to be significant.
