Uncertainty factors on volumes: Stock (upper): x 1.25 Arisings (upper) x 1.75
 Stock (lower): x 0.75 Arisings (lower) x 0.25

WASTE SOURCE BPBDFs remove particulate from the primary coolant circuit and require replacement when differential pressure drops below a certain level.

RADIOACTIVITY

Source: Contamination by activation products will be the main source of activity.

Uncertainty: Specific activity is a function of station operating history. The values quoted are indicative of the activities that might be expected.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: A combination of sample analysis and theoretical assessments. The specific activities stated for future arisings are typical values for a filter at the time of arising.
