Comment on volumes: Waste volumes will be variable depending on station operating conditions. Volumes based on Back to Bio Shield strategy. Work is ongoing looking at optimising the strategy which could lead to a change in volume and timings of arisings across Final Site Clearance wastes (300s) and Pre C&M wastes (100s), in future submissions.

Uncertainty factors on volumes:

A variety of materials from plant dismantling.

PHYSICAL CHARACTERISTICS

General description: This waste stream contains metals and miscellaneous material such as inorganic sludges and flocs. Waste can be packaged in standard NDA packages.

Physical components (%vol): A variety of constituents including metallic items and inorganic sludge.

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): ~1

Comment on density: The density is of the waste as prepared for packaging.

CHEMICAL COMPOSITION

General description and components (%wt): This waste stream contains metals and miscellaneous material such as inorganic sludges and flocs.

Chemical state: Neutral

Chemical form of radionuclides: H-3: Diffused into matrix

C-14: There may be some surface contamination as graphite.

Cl-36: The chlorine will be incorporated in steel components

Se-79: Selenium content not expected to be significant

Tc-99: Not determined

I-129: Not determined

Ra: Radium content is insignificant

Th: Thorium content is Insignificant

U: Not determined

Np: The neptunium content is insignificant

Pu: Not determined

TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off site	Stream volume %
Low force compaction Supercompaction (HFC) Incineration Solidification Decontamination Metal treatment Size reduction Decay storage Recycling / reuse Other / various None		100.0

Comment on planned treatments:

It is likely that in line with the waste hierarchy, wastes will be treated preferentially by incineration, metal decontamination/melting, supercompaction, optimal packaging in disposal containers or immobilisation by encapsulation where necessary, prior to ultimate disposal. At present, insufficient information is available to determine the percentages.

Disposal Routes:

RADIOACTIVITY

Source: Activation of the materials and impurities. There may be some contamination.

Uncertainty: Only very approximate estimates have been made of the total specific activities.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of
radioactivities:

Activation/decay calculations based on neutron flux and projected operating history.

Other information:

No radionuclides other than those listed are expected to be significant.
