Conditioning method: The waste is expected to be encapsulated in a BFS/OPC matrix. Another approach

WASTE STREAM**3M02****Pond Water Filter Sludge**

being kept under review is (i) to dry the sludge (ii) to supercompact drums of dry sludge (iii) to grout the supercompacted drums in an "enhanced" drum.

RADIOACTIVITY

Source:	Contaminated filter precoat. Contamination by activation products will be the main source of activity.
Uncertainty:	The values quoted were based on tank sampling and some theoretical assessments. Factor applied to tank measured activity levels to estimate arisings activity based on steady state input for 30 years.
Definition of total alpha and total beta/gamma:	Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.
Measurement of radioactivities:	Predominantly radiochemical analysis of samples.
