

WASTE STREAM**3M15****Waste Sorting LLW****SITE** Heysham 2**SITE OWNER** EDFE NGL**WASTE CUSTODIAN** EDFE NGL**WASTE TYPE** LLW

Is the waste subject to Scottish Policy: No

WASTE VOLUMES

		Reported
Stocks:	At 1.4.2022.....	10.5 m ³
Future arisings -	1.4.2022 - 31.3.2028.....	15.0 m ³
	1.4.2028 - 31.3.2030.....	4.9 m ³
Total future arisings:		19.9 m ³
Total waste volume:		30.4 m ³

Comment on volumes: Waste volumes will be variable depending on station operating conditions.

Uncertainty factors on volumes:

Stock (upper):	x 1.25	Arisings (upper)	x 1.75
Stock (lower):	x 0.75	Arisings (lower)	x 0.25

WASTE SOURCE

Waste stream covers general solid LLW arisings from the decontamination workshop, operations and maintenance of the active effluent treatment plant and operation of the active laundry. The following areas are included in this process: Decontamination Workshop, Combined Active Waste Building incl. Active Effluent Treatment Plant and Active Laundry.

PHYSICAL CHARACTERISTICS

General description: Wastes from these areas are mixed materials such as metal items, spent filters, redundant plant items, cables, soft waste, wood, heavy duty plastic and rubber waste. Other materials such as asbestos, dried paint, fibre glass, glass, grease, lagging, oily pads, and plaster may be generated. Any free liquids will be removed as far as practical during the sorting process and disposed via an appropriate effluent route. The site does undertake volume reduction by low force compaction, but this is principally to incinerable waste.

Physical components (%wt): Metal (46%), Concrete/rubble (1%), Soil (1%), Biodegradable-non putrescibles (21%), Plastics (halogenated) (5%), Plastics (non-halogenated) (6%), Rubber (13%), Wood (5%), Others (2%)

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): 0.26

Comment on density: Density based on raw volume and weight at arising as provided in WCH.

CHEMICAL COMPOSITION

General description and components (%wt): Stainless steel (11%), mild steel (29%), Copper (3%), Aluminium (3%), Concrete/rubble (1%), Soil (1%), Biodegradable-non putrescibles (21%), Plastics (halogenated) (5%), Plastics (non-halogenated) (6%), Rubber (13%), Wood (5%), Others (2%)

Chemical state: Neutral

Chemical form of radionuclides:

H-3: Tritiated water
 C-14: Contamination by activated graphite and metallic particulate
 Cl-36: To be determined
 Se-79: Not expected to be significant
 Tc-99: Not expected to be significant
 I-129: To be determined
 Ra: Not expected to be significant
 Th: Not expected to be significant
 U: To be determined
 Np: Not expected to be significant
 Pu: To be determined

Metals and alloys (%wt): Metal thicknesses will be variable.

TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off site	Stream volume %
Low force compaction		
Supercompaction (HFC)	Off-site	~10.0
Incineration	Off-site	~40.0
Solidification		
Decontamination		
Metal treatment	Off-site	40.0
Size reduction		
Decay storage		
Recycling / reuse		
Other / various		
None	Off-site	~10.0

Comment on planned treatments:

In line with the waste hierarchy, wastes will be treated preferentially by incineration, metal decontamination/melting, supercompaction, optimal packaging in HHISOs or immobilisation by encapsulation where necessary, prior to ultimate disposal at the LLW Repository. These treatments will be carried out off-site under contract with companies such as LLWR Ltd, Cyclife, Tradebe Inutec.

Disposal Routes:

Disposal Route	Stream volume %	Disposal density t/m3
Expected to be consigned to the LLW Repository	~20.0	
Expected to be consigned to a Landfill Facility		
Expected to be consigned to an On-Site Disposal Facility		
Expected to be consigned to an Incineration Facility	~40.0	
Expected to be consigned to a Metal Treatment Facility	~40.0	
Expected to be consigned as Out of Scope		
Expected to be recycled / reused		
Disposal route not known		

Classification codes for waste expected to be consigned to a landfill facility: -

Upcoming (2022/23-2024/25) Waste Routing (if expected to change from above):

WASTE STREAM 3M15 Waste Sorting LLW

Disposal Route	Stream volume %		
	2022/23	2023/24	2024/25
Expected to be consigned to the LLW Repository			
Expected to be consigned to a Landfill Facility			
Expected to be consigned to an On-Site Disposal Facility			
Expected to be consigned to an Incineration Facility			
Expected to be consigned to a Metal Treatment Facility			
Expected to be consigned as Out of Scope			
Expected to be recycled / reused			
Disposal route not known			

Opportunities for alternative disposal routing: -

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment
-	-	-	-	-	-

Waste Packaging for Disposal:

Container	Stream volume %	Waste loading m ³	Number of packages
1/3 Height IP-1 ISO	20.0	~30.4	< 1
2/3 Height IP-2 ISO			
1/2 Height WAMAC IP-2 ISO			
1/2 Height IP-2 Disposal/Re-usable ISO			
2m box (no shielding)			
4m box (no shielding)			
Other			

Other information: Waste loading is representative of the raw waste following further planned treatments. Supercompaction assumed to reduce volume to 20% of original. Solidification assumed to increase volume to 300% of original. No treatment results in the same volume.

Waste Planned for Disposal at the LLW Repository:

Container voidage: -

Waste Characterisation Form (WCH): The waste meets the LLWR's Waste Acceptance Criteria (WAC).
The waste has a current WCH.
Inventory information is consistent with the current WCH.

Waste consigned for disposal to LLWR in year of generation: No. Efforts are made to dispose of waste during year of arising, but this is dependent on rate of arising throughout the year. This is also dependent on consignment of waste to third parties.

Non-Containerised Waste for In-Vault Grouting: (Not applicable to this waste stream)

Stream volume (%): -

Waste stream variation: -

Bounding cuboidal volume:

Inaccessible voidage: -

Other information: -

RADIOACTIVITY

Source: Contamination will be main source of activity.

WASTE STREAM**3M15****Waste Sorting LLW**

Uncertainty:	The main uncertainties in waste stream fingerprints arise from the underlying assumptions for the fingerprinting process, including in the waste mapping data.
Definition of total alpha and total beta/gamma:	Where totals are shown on the table of radionuclide activities they are the sums of the listed beta/gamma emitting radionuclides plus 'other beta/gamma' not listed on the datasheet.
Measurement of radioactivities:	The total activity has been estimated by applying the fingerprint for the date of arisings. For consignments this will be decayed, but the decay time will vary depending on the storage time for the waste. Therefore, the total given in this WCH is pessimistic, but not considered overly conservative.
Other information:	-
