

**SITE** Hunterston B

**SITE OWNER** EDFE NGL

**WASTE CUSTODIAN** EDFE NGL

**WASTE TYPE** ILW; SPD3

Is the waste subject to  
Scottish Policy:  
Yes

#### **WASTE VOLUMES**

Reported

Stocks: At 1.4.2022..... 9.1 m<sup>3</sup>

Total future arisings: 0 m<sup>3</sup>

Total waste volume: 9.1 m<sup>3</sup>

Comment on volumes: Generation has ended and as such future arisings will be limited to those from defuelling.

Uncertainty factors on  
volumes: Stock (upper): x 1.25 Arisings (upper) x  
Stock (lower): x 0.75 Arisings (lower) x

**WASTE SOURCE** Irradiated reactor control rods, control rod chains and graphite specimen assemblies.

#### **PHYSICAL CHARACTERISTICS**

General description: Redundant or defective control rods and control rod chains and graphite specimen assemblies. The possibility of large items which may need special handling is not assessed.

Physical components (%vol): Percentage breakdown not assessed.

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m<sup>3</sup>): ~0.3

Comment on density: Estimated as 0.3 t/m<sup>3</sup>

#### **CHEMICAL COMPOSITION**

General description and  
components (%wt): The waste is predominantly stainless steel. The material breakdown is not currently assessed.

Chemical state: Neutral

Chemical form of  
radionuclides: H-3: Diffused into materials  
C-14: Incorporated into metal components and activated graphite  
Cl-36: Not Assessed  
Se-79: Not Assessed  
Tc-99: Not Assessed  
I-129: Not Assessed  
Ra: Not Expected to be significant  
Th: Not Assessed  
U: Not Assessed  
Np: Not Assessed  
Pu: Not Assessed

Potential for the waste to Yes.  
contain discrete items:

**PACKAGING AND CONDITIONING**

Conditioning method: The waste will be conditioned to satisfy the disposal requirements which are effective at the time of retrieval/conditioning. It is currently assumed that the waste will be placed in "baskets" in the waste packages and will be encapsulated.

Plant Name: -

Location: Hunterston B Power Station

Plant startup date: ~2107

Total capacity (m<sup>3</sup>/y incoming waste): -

Target start date for packaging this stream: -

Throughput for this stream (m<sup>3</sup>/y incoming waste): -

Other information: All of the waste is expected to be retrieved and conditioned when a conditioning campaign is undertaken. The total plant process rate is not estimated.

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m <sup>3</sup> )	Payload (m <sup>3</sup> )	Number of packages
	4m box (100mm concrete shielding)	100.0	~12.2	~14.3	< 1

Likely container type comment: -

Range in container waste volume: -

Other information on containers: Stainless steel.

Likely conditioning matrix: BFS/OPC

Other information: -

Conditioned density (t/m<sup>3</sup>): ~3.0

Conditioned density comment: The density of the encapsulated waste is expected to be approximately 3 t/m<sup>3</sup>.

Other information on conditioning: Waste will be retained on site pending Final Site Clearance, to let nuclides such as Co-60 undergo considerable radioactive decay. Baskets of different Final Site Clearance ILW wastes may be in the same waste package.

Opportunities for alternative disposal routing: No

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment
-	-	-	-	-	-

## RADIOACTIVITY

Source: Source of activity is activation with possible contamination by fission products and actinides.

Uncertainty: Needs further assessment.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: Theoretical estimates.

Other information: Other beta/gamma nuclides of stocks (in TBq/m<sup>3</sup>) include Cr51 (2E-2) and Co58 (2E-1).
