

WASTE STREAM	4C313	Decommissioning Stage 3: Graphite ILW
---------------------	--------------	--

SITE Torness

SITE OWNER EDFE NGL

WASTE CUSTODIAN EDFE NGL

WASTE TYPE ILW

Is the waste subject to Scottish Policy: Yes

WASTE VOLUMES

	Reported
Stocks: At 1.4.2022.....	0 m ³
Future arisings - 1.4.2022 - 31.3.2116.....	0 m ³
1.4.2116 - 31.3.2117.....	691.3 m ³
1.4.2117 - 31.3.2118.....	764.9 m ³
1.4.2118 - 31.3.2119.....	674.8 m ³
Total future arisings:	2131.0 m ³
Total waste volume:	2131.0 m ³

Comment on volumes: Waste volumes will be variable depending on station operating conditions. Volumes based on Back to Bio Shield strategy. Work is ongoing looking at optimising the strategy which could lead to a change in volume and timings of arisings across Final Site Clearance wastes (300s) and Pre C&M wastes (100s), in future submissions.

Uncertainty factors on volumes: Stock (upper): x Arisings (upper) x 1.25
 Stock (lower): x Arisings (lower) x 0.75

WASTE SOURCE Moderator and reflector graphite from reactor dismantling.

PHYSICAL CHARACTERISTICS

General description: Graphite blocks and other graphite components. Waste can be packaged in standard NDA packages.

Physical components (%wt): Graphite (~100%).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): ~1.28

Comment on density: Future arisings based on envelope volume, density calculated on this basis.

CHEMICAL COMPOSITION

General description and components (%wt): Graphite and possible traces of ferrous metals.

Chemical state: -

Chemical form of radionuclides: H-3: Diffused into matrix
 C-14: Incorporated in the graphite.
 Cl-36: Incorporated in the graphite
 Se-79: Not significant
 Tc-99: Not determined
 I-129: Not significant
 Ra: Radium content is insignificant
 Th: Thorium content is Insignificant
 U: Uranium content is insignificant
 Np: Neptunium content is insignificant
 Pu: Plutonium content is insignificant

Metals and alloys (%wt): -

	(%wt)	Type(s) / Grade(s) with proportions	% of total C14 activity
Stainless steel.....	NE		
Other ferrous metals.....	NE		
Iron.....	0		
Aluminium.....	0

Potential for the waste to contain discrete items: No.

PACKAGING AND CONDITIONING

Conditioning method: The waste is not expected to be supercompacted. It will be placed in "baskets" in the waste packages, and is assumed to be encapsulated.

Plant Name: -

Location: -

Plant startup date: 85 years after reactor shut-down.

Total capacity (m³/y incoming waste): ~5000.0

Target start date for packaging this stream: -

Throughput for this stream (m³/y incoming waste): -

Other information: Waste will be conditioned when removed from the reactor.

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m³)	Payload (m³)	Number of packages
	4m box (100mm concrete shielding)	100.0	~12.12	14.3	176

Likely container type comment: -

Range in container waste volume: -

Other information on containers: Stainless Steel.

Likely conditioning matrix: BFS/OPC

Other information: -

Conditioned density (t/m³): ~1.79

Conditioned density comment: Assumes waste will be encapsulated, matrix would be likely to be BFS/OPC.

Other information on conditioning: The waste will be in baskets placed in the waste packages. Baskets of different Stage 3 ILW wastes may be in the same waste package.

Opportunities for alternative disposal routing: Not yet determined

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment

RADIOACTIVITY

Source: Activation of the graphite and impurities, Contamination by other activated materials.

Uncertainty: The values quoted were derived by calculation from available material specification and are indicative of the activities that are expected. A major source of uncertainty is the impurity levels.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

WASTE STREAM**4C313****Decommissioning Stage 3: Graphite ILW**

Measurement of
radioactivities:

Activation/decay calculations based on neutron flux and projected operating history.

Other information:

There may be some contamination by Cs137. The activities quoted are for the time at which this waste will arise (i.e. ~85 years after end of generation).

Bands (Upper and Lower)

- A a factor of 1.5
- B a factor of 3
- C a factor of 10
- D a factor of 100
- E a factor of 1000

Note: Bands quantify uncertainty in mean radioactivity.

Code

- 1 Measured activity
- 2 Derived activity (best estimate)
- 3 Derived activity (upper limit)
- 4 Not present
- 5 Present but not significant
- 6 Likely to be present but not assessed
- 7 Present in significant quantities but not determined
- 8 Not expected to be present in significant quantity
