| | Stock (lower): | x | Arisings (lower) | x 0.8 |

WASTE SOURCE Reactor decommissioning.

PHYSICAL CHARACTERISTICS

General description: Solid decommissioning waste from Materials Test Reactor internals and biological shields. There may be several items that may require special consideration either for weight or size reasons.

Physical components (%vol): Aluminium (3.17%), Graphite (80.31%), Mild Steel (16.52%),

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): 0.65

Comment on density: No consignor's records for ILW. Therefore, use LLW (5B309).

CHEMICAL COMPOSITION

General description and components (%wt): Aluminium (2.57%), Graphite (56.85%), Mild Steel (40.57%),

Chemical state: Neutral

Chemical form of radionuclides:
H-3: Possibly present.
C-14: Possibly present.
Cl-36: Not known to be present.
Se-79: Possibly present.
Tc-99: Possibly present.
I-129: Not known to be present.
Ra: Not known to be present.
Th: Not known to be present.
U: Not known to be present.
Np: Not known to be present.
Pu: Not known to be present.

Metals and alloys (%wt): Mostly bulk metals, proportions not specified.

| | (%wt) | Type(s) / Grade(s) with proportions | % of total C14 activity |
|---------------------------|-------|-------------------------------------|-------------------------|
| Stainless steel..... | | | |
| Other ferrous metals..... | 40.6 | | |
| Iron..... | | | |
| Aluminium..... | 2.6 | | |
| Beryllium..... | 0 | | |

Potential for the waste to contain discrete items: Yes. Durable engineered steel structures. Cut graphite blocks

PACKAGING AND CONDITIONING

Conditioning method: Waste is to be packaged into 6m3 concrete box or HHISO depending on activity. The 6m3 concrete box will be filled and grouted at source. At the time required by

WASTE STREAM**5B310****Materials Test Reactor ILW**

mobile grouting plant. The Tritiated waste (Aluminium Tanks) will be decay stored and eventually sent for off site Treatment

Plant Name: Temporary Conditioning Plant

Location: Dounreay

Plant startup date: 2022

Total capacity (m³/y incoming waste): 5.0

Target start date for packaging this stream: 2022

Throughput for this stream (m³/y incoming waste): 5.0

Other information: Plant still to be designed and packages yet to be fully confirmed. Plant will be designed to handle required throughput.

| Likely container type: | Container | Waste packaged (%vol) | Waste loading (m ³) | Payload (m ³) | Number of packages |
|------------------------|--|-----------------------|---------------------------------|---------------------------|--------------------|
| | 6m ³ concrete box (SD) | 97.0 | 3.78 | 5.76 | 3 |
| | Other(HHISO for decay storage of Tritiated metal (Aluminium Tank) - displacement volume = 19.5m ³) | 3.0 | 3.9 | 19.5 | < 1 |

Likely container type comment: The waste will be packaged in a 6m³ concrete box (SD), or for tritiated waste, will be decay stored until being sent for Off site Metal Treatment

Range in container waste volume: Not established

Other information on containers: The intent would be to use an IP2 rated HHISO as it may need to be used to transport the RAT off site.

Likely conditioning matrix: Cement

Other information: Cement for Concrete Boxes. The RAT will not be grouted in the HHISO

Conditioned density (t/m³): ~2.5

Conditioned density comment: The density is likely to be around 2 - 3 t/m³.

Other information on conditioning: -

Opportunities for alternative disposal routing: -

| Baseline Management Route | Opportunity Management Route | Stream volume (%) | Estimated Date that Opportunity will be realised | Opportunity Confidence | Comment |
|--|------------------------------|-------------------|--|------------------------|--|
| Disposal at a Near Surface / Near Site Disposal Facility | Metal treatment | 3.0 | - | High | An Options Study has shown that decay storage of bulk aluminium waste from this stream for future recycling represents BPM |

RADIOACTIVITY

Source: The main sources of activity are activated and contaminated equipment/structures.

Uncertainty: Within a factor of three.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: The activity has been taken from package data from the DMTR ILoC.

Other information: Specific Activity uses UKRWI 2019 data decayed to 2022
