

WASTE STREAM	5B330	CHILW Retrievable Drum Store ILW
---------------------	--------------	---

SITE Dounreay
SITE OWNER Nuclear Decommissioning Authority

WASTE CUSTODIAN Dounreay Site Restoration Limited

WASTE TYPE ILW

Is the waste subject to Scottish Policy: Yes

WASTE VOLUMES

		Reported
Stocks:	At 1.4.2022.....	0 m ³
Future arisings -	1.4.2041 - 31.3.2042.....	0.6 m ³
	1.4.2042 - 31.3.2043.....	0.1 m ³
Total future arisings:		0.8 m ³
Total waste volume:		0.8 m ³

Comment on volumes: Arising rates have been revised in line with DSRL's provisional Life Time Plan which has been updated since 2019. Stocks volumes have been re-evaluated since 2016 and are currently zero as per LoC/29919616; these are now incorporated under 5B24.

Uncertainty factors on volumes: Stock (upper): x Arisings (upper) x 1.2
 Stock (lower): x Arisings (lower) x 0.8

WASTE SOURCE This waste arises from the decommissioning of the high alpha low beta/gamma retrievable drum store - those areas which are contaminated with CHILW.

PHYSICAL CHARACTERISTICS

General description: The waste will mainly be contaminated steel and components from a glovebox. No large items are expected.
 Physical components (%wt): Glass (5.69%), Lead (2.85%), Mild Steel (83.09%), Plastic (7.32%), Rubber (0.08%), Paper / Cardboard (0.97%),
 Sealed sources: Not yet determined.
 Bulk density (t/m³): 0.25
 Comment on density: The bulk density is based on consignor's estimates.

CHEMICAL COMPOSITION

General description and components (%wt): Glass (2.01%), Lead (4.55%), Mild Steel (92.46%), Plastic (0.95%), Rubber (0.02%), Paper / Cardboard (<0.01%)
 Chemical state: Neutral
 Chemical form of radionuclides: H-3: Not expected to be present.
 C-14: Not expected to be present.
 Cl-36: Not expected to be present.
 I-129: Not expected to be present.
 Ra: Not expected to be present.
 Th: Not expected to be present.
 U: May be present as oxide at low levels.
 Np: May be present at low levels.
 Pu: May be present as oxide at low levels.
 Metals and alloys (%wt): The metal will probably be present as thin steel sheeting.

Potential for the waste to contain discrete items: No.

PACKAGING AND CONDITIONING

Conditioning method: The waste will continue to be stored in 200 litre drums until a conditioning route is available. The current strategy is for this material to be compacted, with the resultant pucks grouted into 500 litre drums. Some waste drums may not be suitable for compaction and these will be directly loaded into 500 l drums. This waste stream will be copackaged into 500L drums alongside all wastes from 5B19 and the CHILW from decommissioning waste streams.

Plant Name: CHILW Repacking Facility

Location: Dounreay

Plant startup date: 2026

Total capacity
(m³/y incoming waste): -

Target start date for
packaging this stream: 2026

Throughput for this stream
(m³/y incoming waste): -

Other information: Material may be processed with other CHILW.

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	500 l drum	100.0	1	0.5	< 1

Likely container type comment: The conditioning factor for CHILW is about 0.5

Range in container waste volume: It is estimated that between 2 and 8 pucks with an average of 5 pucks will be placed in a 500 l drum. A small percentage of drums unsuitable for suercompaction will be grouted directly into the 500 l drum.

Other information on containers: Stainless steel.

Likely conditioning matrix: Cement

Other information: -

Conditioned density (t/m³): ~2.5

Conditioned density comment: The density of the conditioned product is likely to be in the range 2-3 te/m3.

Other information on conditioning: -

Opportunities for alternative disposal routing: No

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment
-	-	-	-	-	-

RADIOACTIVITY

Source: The source of radioactivity is from the CHILW repackaging and storage operations previously carried out in the facility.

Uncertainty: Specific activity of waste arisings is based on 5B24 operational waste and should be regarded as a worst case estimate.

WASTE STREAM**5B330****CHILW Retrievable Drum Store ILW**

Definition of total alpha and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities:

-

Other information:

Specific Activity uses 2019 data decayed to 2022.
