

SITE	Dounreay	
SITE OWNER	Nuclear Decommissioning Authority	
WASTE CUSTODIAN	Dounreay Site Restoration Limited	
WASTE TYPE	ILW	
Is the waste subject to Scottish Policy:	Yes	
WASTE VOLUMES	Reported	
Stocks:	At 1.4.2022.....	9.2 m ³
Future arisings -		
	1.4.2029 - 31.3.2030.....	4.7 m ³
	1.4.2030 - 31.3.2031.....	6.3 m ³
	1.4.2031 - 31.3.2032.....	6.3 m ³
	1.4.2032 - 31.3.2033.....	6.3 m ³
	1.4.2033 - 31.3.2034.....	6.3 m ³
	1.4.2034 - 31.3.2035.....	6.3 m ³
	1.4.2035 - 31.3.2036.....	6.3 m ³
	1.4.2036 - 31.3.2037.....	2.8 m ³
Total future arisings:		45.3 m ³
Total waste volume:		54.5 m ³
Comment on volumes:	It should be noted that the DSRL is using a provisional LifeTime Plan and arisings dates are subject to change. Arisings have been revised in line with the Predictive Waste Inventory walk round exercise. Waste stream is mainly RHILW but this facility is also beginning to consign CHILW too.	
Uncertainty factors on volumes:	Stock (upper): x 1.2 Stock (lower): x 0.8	Arisings (upper) x 1.2 Arisings (lower) x 0.8
WASTE SOURCE	Waste arisings will be from the decommissioning of the DCP itself only (short term) with the Stores being decommissioned in around 80 years time.	
PHYSICAL CHARACTERISTICS		
General description:	Drum conveying and manipulation equipment, pressure vessels and pipework. There are no large items that will influence packaging selection.	
Physical components (%vol):	Stainless steel (100%)	
Sealed sources:	Not yet determined.	
Bulk density (t/m ³):	0.27	
Comment on density:	The bulk density is approximately based on consignor's records.	
CHEMICAL COMPOSITION		
General description and components (%wt):	Stainless steel pipework and vessels (100%)	
Chemical state:	Neutral	
Chemical form of radionuclides:	H-3: May be present at very low concentrations. C-14: May be present at very low concentrations. Cl-36: May be present at very low concentrations. Se-79: May be present at very low concentrations. Tc-99: May be present at very low concentrations. I-129: May be present at very low concentrations. Ra: May be present at very low concentrations. Th: May be present at very low concentrations. U: May be present as nitrate at low concentrations. Np: May be present at very low concentrations. Pu: May be present as nitrate at low concentrations.	
Metals and alloys (%wt):	Both sheet and bulk metals likely to be present, proportions not specified.

Potential for the waste to contain discrete items: Yes. Durable engineered steel structures

PACKAGING AND CONDITIONING

Conditioning method: RHILW will be packaged into 500l drums for long term storage. CHILW will be supercompacted with the pucks being encapsulated into 500L drums.

Plant Name: RHILW and CHILW Repackaging Facilities

Location: Dounreay

Plant startup date: 2026 & 2028

Total capacity
(m³/y incoming waste): -

Target start date for packaging this stream: 2026

Throughput for this stream
(m³/y incoming waste): ~7.0

Other information: CHILW and RHILW Repacking plant are in design phase. Assume throughput unconstrained.

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	500 l drum	100.0	0.211	0.5	259

Likely container type comment: The conditioning factor for RHILW will be about 1.7 while that for CHILW is about 0.5.

Range in container waste volume: It is estimated that between 2 and 8 CHILW pucks will be placed into each 500l drum with the average being 5 drums per 500L drum. A small percentage of drums may not be suitable for supercompaction and will be directly immobilised into the 500l drum. Assume 3:2 Z6033 to 500L drum ratio.

Other information on containers: This wastestream is majority RHILW with some CHILW being produced from maintenance/operational activities.

Likely conditioning matrix: Cement

Other information:

Conditioned density (t/m³): ~2.5

Conditioned density comment: The density is likely to be around 2-3 t/m³

Other information on conditioning:

Opportunities for alternative disposal routing: No

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment

RADIOACTIVITY

- Source: The main sources of activity are contaminated equipment/structures.
- Uncertainty: The activities given are best estimates.
- Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.
- Measurement of radioactivities: Stocks data has been calculated from combined ILW LoC radionuclide information. Arisings specific activity has been calculated using consignors records.
- Other information: Specific activities are from UKRWI 2019 decayed to 2022
