

<b>WASTE STREAM</b>	<b>5B354</b>	<b>PFR SDP Ion Exchange Columns</b>
---------------------	--------------	-------------------------------------

**SITE** Dounreay

**SITE OWNER** Nuclear Decommissioning Authority

**WASTE CUSTODIAN** Dounreay Site Restoration Limited

**WASTE TYPE** ILW

Is the waste subject to Scottish Policy: Yes

**WASTE VOLUMES**

		Reported
Stocks:	At 1.4.2022.....	3.8 m <sup>3</sup>
Future arisings -	1.4.2031 - 31.3.2032.....	0.1 m <sup>3</sup>
	1.4.2032 - 31.3.2033.....	0.3 m <sup>3</sup>
Total future arisings:		0.4 m <sup>3</sup>
Total waste volume:		4.2 m <sup>3</sup>

Comment on volumes: It should be noted that DSRL is currently using a provisional site programme and that arisings dates are subject to change. Each 200 litre drum has an internal volume of 0.2 m<sup>3</sup> hosting within it a carbon steel ion exchange column filled with approximately 57 litres of ion exchange media.

Uncertainty factors on volumes: Stock (upper): x 1.02 Arisings (upper) x 1.02  
 Stock (lower): x 0.98 Arisings (lower) x 0.98

**WASTE SOURCE**

The Sodium Disposal Plant (SDP) was used to dispose of bulk sodium from the PFR primary and secondary circuits. Initially sodium was reacted with water to produce NaOH that was treated with HCl to produce NaCl. The caesium removal plant removed radioactive contaminants from the brine by passing the solution through ion exchange columns.

**PHYSICAL CHARACTERISTICS**

General description: The carbon steel and lead, forming the actual physical structure of the ion exchange columns, will form the bulk of the waste. Steel from the Z6033 drum. The resin used makes up the balance.

Physical components (%vol): Stainless Steel (29.8%), Lead (34.3%), Other Plastic (2.3%), Inorganic ion-exchange resin (33.6%)

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m<sup>3</sup>): 2.5

Comment on density: Based on sample of 18 PFR CRP drums. Density includes all parts of the columns and drums; lead being extremely dense.

**CHEMICAL COMPOSITION**

General description and components (%wt): Steel (56.6%), lead (32%), inorganic ion-exchange resin (11.4%).

Chemical state: Neutral

Chemical form of radionuclides: -

Metals and alloys (%wt): The steel will be present as ion exchange column housings.

	(%wt)	Type(s) / Grade(s) with proportions	% of total C14 activity
Stainless steel.....	56.6	Probably M316.	
Other ferrous metals.....	0

Other materials (%wt):

Two resins are available for use:Cs Treat resin [Potassium Hexacyano Cobalt(II) - Ferrate(II)] is odourless, non-toxic, non-flammable, and has a brown/black granular appearance. Hydrogen cyanide may evolve if heated with strong mineral acids.KniFC-PAN resin [Potassium-Nickel Hexacyanoferrate in a Polyacrylonitrile binding matrix] consists of odourless, non-flammable green/brown beads.

<b>WASTE STREAM</b>	<b>5B354</b>	<b>PFR SDP Ion Exchange Columns</b>
---------------------	--------------	-------------------------------------

Potential for the waste to contain discrete items: No.

**PACKAGING AND CONDITIONING**

Conditioning method: The reference position is that the columns will be immobilised by first filling with polymer to immobilise the ion exchange material, then by cementing into a 500 litre drum.

Plant Name: RHILW Repackaging Plant

Location: Dounreay

Plant startup date: 2028

Total capacity (m<sup>3</sup>/y incoming waste): NE

Target start date for packaging this stream: 2032

Throughput for this stream (m<sup>3</sup>/y incoming waste): NE

Other information: -

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m <sup>3</sup> )	Payload (m <sup>3</sup> )	Number of packages
	500 l drum	100.0	0.2	0.5	22

Likely container type comment: The conditioning factor will be 2.5 if a single column is immobilised in each 500 litre drum.

Range in container waste volume: -

Other information on containers: -

Likely conditioning matrix: Not Specified

Other information: The choice of polymer matrix for filling the columns will require development work.

Conditioned density (t/m<sup>3</sup>): ~2.0

Conditioned density comment: The conditioned waste density is expected to be about 2 te/m<sup>3</sup>.

Other information on conditioning: -

Opportunities for alternative disposal routing: No

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment
-	-	-	-	-	-

**RADIOACTIVITY**

Source: The activity of the ion exchange columns is based on the entire inventory of the PFR primary coolant assuming that it is completely absorbed onto the ion exchanger. The radionuclide inventory for the PFR sodium coolant has been derived from sampling of the PFR coolant. Radiation measurements and Microshield calculations have been used for Consignors records.

Uncertainty: Within a factor of three.

**WASTE STREAM****5B354****PFR SDP Ion Exchange Columns**

Definition of total alpha and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities:

Consignors records for all the drums were used to generate a specific activity.

Other information:

The activities quoted are for the 'as stored' volumes ie 200 litre drums. Specific Activity has been derived from 2019 UKRWI data decayed to 2022
