| Comment on volumes:             | The stream comprises of only one remaining ILW source, which has been identified and listed in the source register. The stream has been updated to reflect this using the common volume assumption per source of 0.0002m <sup>3</sup> per source (10cm x 10cm x 2cm). |                        |
| Uncertainty factors on volumes: | Stock (upper): x  | Arisings (upper) x 1.1 |
|                                 | Stock (lower): x  | Arisings (lower) x 0.9 |

**WASTE SOURCE**

Redundant source.

**PHYSICAL CHARACTERISTICS**

General description: Total volume of sources is very small. Individual sources to be packed with other RHILW within activity limits.  
 Physical components (%vol): Sources (100%)  
 Sealed sources: The waste contains sealed sources. One remaining Sr90 source  
 Bulk density (t/m<sup>3</sup>): ~~8  
 Comment on density: Miscellaneous sources.

**CHEMICAL COMPOSITION**

General description and components (%wt): One remaining Sr90 source.  
 Chemical state: -  
 Chemical form of radionuclides: Cl-36: Not known, possibly chloride.  
 Ra: Not known, possibly chloride.  
 Metals and alloys (%wt): None.

Potential for the waste to contain discrete items: Not yet determined. Subject to DI type assessment (specific clauses within WAC)

#### PACKAGING AND CONDITIONING

Conditioning method: Waste will be transferred to Harwell for onward processing via the Solid Waste Complex cells with other ILW streams (likely to be co-packaged with 6C32).  
 Plant Name: Harwell Head End Cells  
 Location: Harwell  
 Plant startup date: -  
 Total capacity (m<sup>3</sup>/y incoming waste): -

**WASTE STREAM****5G04****Winfirth ILW Sources**

Target start date for packaging this stream:

-

Throughput for this stream (m<sup>3</sup>/y incoming waste):

-

Other information:

Total volume of source is very small. Individual source to be packed with other ILW at Harwell (likely 6C32) within activity limits.

Likely container type:

| Container | Waste packaged (%vol) | Waste loading (m <sup>3</sup> ) | Payload (m <sup>3</sup> ) | Number of packages |
|-----------|-----------------------|---------------------------------|---------------------------|--------------------|
|           |                       |                                 |                           |                    |

Likely container type comment:

Individual source to be packed with other ILW at Harwell (likely to be 6C32) within activity limits, therefore maximising packaging efficiency.

Range in container waste volume:

-

Other information on containers:

-

Likely conditioning matrix:

Other information:

-

Conditioned density (t/m<sup>3</sup>):

-

Conditioned density comment:

-

Other information on conditioning:

Opportunities for alternative disposal routing:

-

| Baseline Management Route | Opportunity Management Route | Stream volume (%) | Estimated Date that Opportunity will be realised | Opportunity Confidence | Comment |
|---------------------------|------------------------------|-------------------|--|------------------------|---------|
| -                         | -                            | -                 | -  | -                      | -       |

**RADIOACTIVITY**

Source:

Source.

Uncertainty:

The waste is a single source, therefore the specific activity is dependent on the recorded volume of this small item. The volume has been estimated and therefore represents an area of some uncertainty on the specific activity, although the total activity is known.

Definition of total alpha and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities:

Recorded activities for specified source decayed to 01/04/2034

Other information:

Only one remaining source in this stream is Sr90. The radionuclide activity content of the source is recorded in an inventory list.

**Bands (Upper and Lower)**

A a factor of 1.5

B a factor of 3

C a factor of 10

D a factor of 100

E a factor of 1000

Note: Bands quantify uncertainty in mean radioactivity.

**Code**

1 Measured activity

2 Derived activity (best estimate)

3 Derived activity (upper limit)

4 Not present

5 Present but not significant

6 Likely to be present but not assessed

7 Present in significant quantities but not determined

8 Not expected to be present in significant quantity
