WASTE CUSTODIAN	United Kingdom Atomic Energy Authority		
WASTE TYPE	ILW		
Is the waste subject to Scottish Policy:	No		
WASTE VOLUMES	Reported		
Stocks:	At 1.4.2022..... 0 m ³		
Future arisings -	1.4.2022 - 31.3.2040..... ~~1.6 m ³		
Total future arisings:	1.6 m ³		
Total waste volume:	1.6 m ³		
Comment on volumes:	New stream for the UKAEA Materials Research Facility (MRF) running from 2022 to 2039, the facility arisings will depend on research requirements of the UK and European nuclear industry and therefore are uncertain at this time. The MRF (Materials Research Facility) and other related UKAEA (non JET) facilities are forecast to run for 20 years with active operations beginning in 2019, volumes are expected to be ~~200l per year but will depend on the operational activities in the facility.		
Uncertainty factors on volumes:	Stock (upper): x Arisings (upper) x 1.5 Stock (lower): x Arisings (lower) x 0.1		
WASTE SOURCE	Neutron activated and tritium contaminated nuclear components used for research, original source includes nuclear facilities in the UK and Europe.		
PHYSICAL CHARACTERISTICS			
General description:	Majority of activity will be contained within metal samples and related dust following cutting, polishing and sub-sampling during research activities. The majority of volume/mass will consist of polishing pads, cutting / grinding consumables and filters or other consumables not suitable for incineration. Waste is cleaned, segregated, sorted, sampled and size reduced where possible to enable packaging in to disposal packages and to confirm disposal route.		
Physical components (%wt):	-		
Sealed sources:	Not yet determined.		
Bulk density (t/m ³):	~~0.55		
Comment on density:	Bulk density is an estimate based on expected arisings.		
CHEMICAL COMPOSITION			
General description and components (%wt):	Sample consumables incl gloves and wipes (~40%), filters (~35%), gators (~6%), mounting blocks (~6%), polishing pads (~2%), cutting wheels (~1%) , samples and sample debris (<10%).		
Chemical state:	Neutral		
Chemical form of radionuclides:	H-3: Mainly outgassed tritium present in the form of tritiated water vapour, and some absorbed into material surfaces.		
Metals and alloys (%wt):	-

Potential for the waste to contain discrete items: Yes.

PACKAGING AND CONDITIONING

Conditioning method: Waste conditioned for transport into a Type A/B 1648C (Chapel Cross Flask).

Plant Name: Mixed Beta Gamma Waste Store.

Location: Sellafield.

Plant startup date: Not known.

Total capacity (m³/y incoming waste): -

Target start date for packaging this stream: -

Throughput for this stream (m³/y incoming waste): -

Other information: MRF waste will be added to Mixed Beta Gamma Waste Store for interim storage .

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages

Likely container type comment: -

Range in container waste volume: -

Other information on containers: -

Likely conditioning matrix: -

Other information: -

Conditioned density (t/m³): -

Conditioned density comment: -

Other information on conditioning: -

Opportunities for alternative disposal routing: Not yet determined

-	-	-	-	-	-

RADIOACTIVITY

Source: Activity is expected to originate from activated metal dust contamination of tools, equipment and consumables.

Uncertainty: Currently there are large uncertainties in the specific activity of the waste as this will depend on the nature of samples submitted for analysis and the operational programme of the facility.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

WASTE STREAM**5H11****UKAEA ILW Non-Incinerable**

Measurement of
radioactivities:

Activities are estimates only. Once operations commence specific and total activities for the waste stream will be determined by gamma spectroscopy and other relevant techniques based on the radiochemical nature of samples (e.g. acid dissolution followed by liquid scintillation counting).

Other information:
