	1.4.2040 - 31.3.2042.....
	14.0 m ³
	1.4.2043 - 31.3.2080.....
	0 m ³
Total future arisings:	314.0 m ³
Total waste volume:	314.0 m ³

Comment on volumes: Future arisings are estimated on the decommissioning plans for facilities on-site, which have been recently reviewed. The review has seen a reduction in future arisings for this waste stream. The total volume of arisings will depend on the longevity of the AWE site, with estimates being based on a 2080 site closure.

Uncertainty factors on volumes: Stock (upper): x Arisings (upper) x 4.0
Stock (lower): x Arisings (lower) x 0.5

WASTE SOURCE Manufacture of fuel items, disposal of legacy waste and facility maintenance.

PHYSICAL CHARACTERISTICS

General description: The waste will consist of solids arising from decommissioning operations.

Physical components (%wt): As there is no current stock for this waste stream, and no disposals have been made in the past nine years, physical components are assumed to be unchanged from the 2019 UKRWI. Metallic waste (73.7%), plastics and rubber (22.1%), cellulosics (3.8%), glass (0.3%) and asbestos (<0.1%).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): ~0.45

Comment on density: The density is based on the 2013 UKRWI, as this was the last time stock was available to determine a density figure.

CHEMICAL COMPOSITION

General description and components (%wt): Metallic waste (73.7%), plastics and rubber (22.1%), cellulosics (3.8%), glass (0.3%) and asbestos (<0.1%).

Chemical state: Neutral

Chemical form of radionuclides: H-3: Not present in 7A117 Waste Stream
C-14: Not present in 7A117 Waste Stream
Cl-36: Not present in 7A117 Waste Stream
Se-79: Not present in 7A117 Waste Stream
Tc-99: Not present in 7A117 Waste Stream
I-129: Not present in 7A117 Waste Stream
Ra: Only daughter products present from uranium in this waste stream. Oxide form
Th: Only daughter products present from uranium in this waste stream. Oxide form
U: Present in oxide form
Np: Not present in 7A117 Waste Stream
Pu: Not present in 7A117 Waste Stream

Metals and alloys (%wt): Predictions indicate that sheet metal of approximately 4 mm thickness will be present, arising from glove-boxes. Also, sheet metal from ductwork (6mm thickness) is likely to be present in the 7A117 Waste Stream.

Potential for the waste to contain discrete items: Not yet determined.

PACKAGING AND CONDITIONING

Conditioning method: The proposal is to supercompact the 200 litre drums and load the pucks into a 500 litre drum and grout with cement.

Plant Name: -

Location: Sellafield, Seascale, Cumbria.

Plant startup date: Unknown

Total capacity (m³/y incoming waste): -

Target start date for packaging this stream: -

Throughput for this stream (m³/y incoming waste): -

Other information: -

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	500 l drum	100.0	~1	~0.5	314

Likely container type comment: The loading is an estimate based on experience with similar waste at Sellafield.

Range in container waste volume: A maximum of five pucks will be packed into a 500 litre drum.

Other information on containers: Not specified

Likely conditioning matrix: Not Specified

Other information: -

Conditioned density (t/m³): ~2.0

Conditioned density comment: The conditioned density is an estimate which is subject to change.

Other information on conditioning: -

Opportunities for alternative disposal routing: Not yet determined

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment

RADIOACTIVITY

Source:	Enriched uranium.
Uncertainty:	Declared activity of waste arisngs has limited accuracy as this waste has not been produced before.
Definition of total alpha and total beta/gamma:	Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.
Measurement of radioactivities:	Fingerprints are well understood for this material type. Low and high resolution gamma-ray spectrcscopy is principally used to assay this waste stream.
Other information:	Decay nuclides with a half-life of less than three months have been omitted.
