| | 1.4.2063 - 31.3.2080..... | 0 m ³ |

Total future arisings: 2.3 m³Total waste volume: 4.8 m³

Comment on volumes: Waste contained within a 205 litre drum, but constitutes to 20 x 1 litre packages per drum. Data reviewed in 2022 highlights a reduction in future arisings from the 2019 UKRWI. It is important to understand that the outer drums, which contain the waste packages, are just handling aids. It is the inner smaller packages that will be processed. A project is currently looking at the viability of repacking 50% of the waste.

Uncertainty factors on volumes: Stock (upper): x 2.0 Arisings (upper) x 5.0
Stock (lower): x 0.5 Arisings (lower) x 0.5**WASTE SOURCE** The waste are generated from processes used to refine metals.**PHYSICAL CHARACTERISTICS**

General description: Mixed pyrochemical salts and crucible wastes.

Physical components (%wt): The composition of this waste has not been determined.

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): 3.15

Comment on density: Reviewed in 2022 and no change since the 2019 UKRWI.

CHEMICAL COMPOSITION

General description and components (%wt): -

Chemical state: -

Chemical form of radionuclides: H-3: Not present in waste stream
C-14: Not present in waste stream
Cl-36: Not present in waste stream
Se-79: Not present in waste stream
Tc-99: Not present in waste stream
I-129: Not present in waste stream
Ra: Only daughter products present from uranium in this waste stream. Oxide form
Th: Only daughter products present from uranium in this waste stream. Oxide form
U: Present as metal or metal oxide
Np: Np-237 present in waste stream as oxide form from daughter product of Am-241 alpha decay.
Pu: Present as metal or metal oxide

Metals and alloys (%wt): -

RADIOACTIVITY

| | |
|---|---|
| Source: | Plutonium contamination |
| Uncertainty: | The total stock activity is based on a review of stock in 2022 and the activity figures from 2019, which have been decay corrected and adjusted to accommodate the volume. |
| Definition of total alpha and total beta/gamma: | The totals in the table of radionuclide activities are the sums of the listed alpha or beta/gamma emitting radionuclides. |
| Measurement of radioactivities: | A programme is ongoing to re-assay these wastes using PNCC and high resolution gamma spectrometry. Decay nuclides with a half-life of less than 3 months have been omitted. |
| Other information: | - |
