

WASTE STREAM**7E101****Site and Facilities Decommissioning Waste: Steel and Building Rubble****SITE** Rosyth Royal Dockyard**SITE OWNER** Babcock International Group**WASTE CUSTODIAN** Babcock International Group**WASTE TYPE** LLW

Is the waste subject to Scottish Policy: No

WASTE VOLUMES

		Reported
Stocks:	At 1.4.2022.....	0 m ³
Future arisings -	1.4.2022 - 31.3.2023.....	0 m ³
	1.4.2023 - 31.3.2024.....	0 m ³
	1.4.2024 - 31.3.2025.....	0 m ³
	1.4.2025 - 31.3.2037.....	25.0 m ³
Total future arisings:		25.0 m ³
Total waste volume:		25.0 m ³

Comment on volumes: The arisings will not be constant as it will depend upon which particular facilities are being decommissioned in any given period. Submarine dismantling is expected to finish in 2035, with site shutdown scheduled for completion in 2037. The waste volumes represent the most likely arising volumes of decommissioning wastes.

Uncertainty factors on volumes: Stock (upper): x Arisings (upper) x 2.0
 Stock (lower): x Arisings (lower) x 0.2

WASTE SOURCE Decommissioning of site facilities such as active ventilation systems, waste store building structure and portable effluent treatment facility.**PHYSICAL CHARACTERISTICS**

General description: Scrap steel, spoil, building rubble.

Physical components (%vol): Approximatelyt 34% steel, 66% building rubble and spoil.

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): 2

Comment on density: The bulk density of the raw waste is 2 t/m3.

CHEMICAL COMPOSITION

General description and components (%wt): The waste is expected to be composed of metals, spoil, building rubble, brick and concrete. The composition by weight is 8% mild steel, 26% stainless steel, 33% spoil and 33% building rubble, brick and concrete.

Chemical state: Neutral

Chemical form of radionuclides: H-3: May be present but chemical form has not been determined.
 C-14: May be present but chemical form has not been determined.
 Ra: May be present but chemical form has not been determined.
 Th: May be present but chemical form has not been determined.
 U: May be present but chemical form has not been determined.

Metals and alloys (%wt): Mild steel contaminated metal is present as sheet (ex-ventilation trunking), typical thickness up to 5mm.

	(%wt)	Type(s) / Grade(s) with proportions	% of total C14 activity
Stainless steel.....	~26.0		
Other ferrous metals.....	~8.0

RADIOACTIVITY

Source: Activation products, principally cobalt-60.

Uncertainty: The specific activity data presented in the data sheet is the mean radioactivity contents of three HHISO containers packed with 7E101 waste disposed of to the LLWR. This is likely to be representative of the radioactivity content of future disposals, taking radioactive decay into account.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: The specific activity data is the mean radioactivity contents of the three HHISO containers packed with 7E101 waste disposal off to the LLWR.

Other information: -
