	1.4.2080 - 31.3.2090.....	70.0 m ³
	1.4.2090 - 31.3.2100.....	70.0 m ³
	1.4.2100 - 31.3.2110.....	70.0 m ³
	1.4.2110 - 31.3.2111.....	7.0 m ³
Total future arisings:		640.0 m ³
Total waste volume:		644.0 m ³

Comment on volumes: The rate of future arisings depends on the number of submarines berthed at Clyde and site decommissioning work. Future arisings largely depends on submarine maintenance programme and changes to reactor design and operations. Maintenance programmes for nuclear submarines are very well developed and predictable; however, there have been historical examples of unexpected repairs which could generate significant quantities of additional waste.

Uncertainty factors on volumes: Stock (upper): x 1.2 Arisings (upper) x 2.0
Stock (lower): x 0.8 Arisings (lower) x 0.5

WASTE SOURCE Non-metallic LLW is generated primarily from reactor maintenance; secondary wastes are generated in facilities that provide submarine support services e.g. radioactive component processing, radiochemistry laboratory, etc.

PHYSICAL CHARACTERISTICS

General description: The waste mainly consists of combustible materials such as polythene sheeting, contaminated swabs, hoses, clothing, etc. There are no large items.

Physical components (%wt): The waste is principally plastic, cellulose, and rubber in polythene bags. It is neutral, and neither oxidising or reducing. Plastic (50%), cellulose (25%), PVC (15%), mild steel (3%), iron (3%) rubber (2%) and others (2%).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): 0.053

Comment on density: Total mass of waste in stock is 209.8 kg.

CHEMICAL COMPOSITION

General description and components (%wt): The waste is principally plastic, cellulose, and rubber in polythene bags. It is neutral, and neither oxidising or reducing. Plastic (50%), cellulose (25%), PVC (15%), mild steel (3%), iron (3%) rubber (2%) and others (2%).

Chemical state: Neutral

Chemical form of radionuclides: H-3: HTO
C-14: Methane
Cl-36: Chloride

Metals and alloys (%wt): The trace metals present are flux wire, swarf and grindings (fine metal dust).

Potential for the waste to contain discrete items: Yes. 7F22 could contain items of interest if encountered or exposed.

TREATMENT, PACKAGING AND DISPOSAL

Planned on-site / off-site treatment(s):

Treatment	On-site / Off site	Stream volume %
Low force compaction Supercompaction (HFC) Incineration Solidification Decontamination Metal treatment Size reduction Decay storage Recycling / reuse Other / various None	Off-site	~100.0

Comment on planned treatments:

Incineration has been identified as the BPM for all recent disposals of 7F22 waste, including 2020 and 2021. It is intended to use this route extensively for future disposals.

Disposal Routes:

Disposal Route	Stream volume %	Disposal density t/m3
Expected to be consigned to the LLW Repository Expected to be consigned to a Landfill Facility Expected to be consigned to an On-Site Disposal Facility Expected to be consigned to an Incineration Facility Expected to be consigned to a Metal Treatment Facility Expected to be consigned as Out of Scope Expected to be recycled / reused Disposal route not known	100.0	

Classification codes for waste expected to be consigned to a landfill facility: -

Upcoming (2022/23-2024/25) Waste Routing (if expected to change from above):

Disposal Route	Stream volume %		
	2022/23	2023/24	2024/25
Expected to be consigned to the LLW Repository Expected to be consigned to a Landfill Facility Expected to be consigned to an On-Site Disposal Facility Expected to be consigned to an Incineration Facility Expected to be consigned to a Metal Treatment Facility Expected to be consigned as Out of Scope Expected to be recycled / reused Disposal route not known			

WASTE STREAM**7F22****Submarine Reactor Wastes (Non-metallic)****Opportunities for alternative disposal routing:** No

RADIOACTIVITY

Source: Submarine reactor plant maintenance and secondary wastes from support services.

Uncertainty: Systematic sampling and analysis is periodically undertaken to provide a generic fingerprint for heterogeneous waste. Difficult to measure radionuclides are inferred from gamma activity assessment and fingerprint application.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: Active waste monitors are used to assess waste for medium to high energy gamma activity. The 7F22 waste stream characterisation fingerprint is used to infer the activity of difficult to measure radionuclides. Future arisings will be subject to further radiochemical analysis to substantiate or augment the derived fingerprint.

Other information: Radionuclide specific activities have been re-calculated using measured activity and mass, WCH fingerprint, and estimated volumes.
