WASTE CUSTODIAN Magnox Limited

ILW WASTE TYPE

Is the waste subject to

Scottish Policy:

No

WASTE VOLUMES

Reported

Stocks: At 1.4.2022..... $0 \, \text{m}^3$ 1.4.2074 - 31.3.2077...... 270.0 m³ Future arisings -Total future arisings: 270.0 m³

270.0 m³ Total waste volume:

Comment on volumes: Waste arisings are assumed to occur at a uniform rate over 3 years. Final Dismantling &

> Site Clearance is assumed to commence in 2070 with reactor dismantling commencing in 2074 and lasting for 3 years. The volumes and radioactivity have been calculated for 85

years after reactor shutdown, i.e. 2074.

Uncertainty factors on Stock (upper): Arisings (upper) x 1.2 Х volumes: Stock (lower): Arisings (lower) x 0.8

Mild steel items from the reactor structure. WASTE SOURCE

PHYSICAL CHARACTERISTICS

General description: A variety of mild steel items including charge pan and restraint beam components. Waste

can be packaged in standard containers.

Physical components (%vol): Mild steel items (100%).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m3): ~1.4

Comment on density: The density is of the waste as cut for packaging.

CHEMICAL COMPOSITION

General description and components (%wt):

Mild steel (100%).

Chemical state:

Neutral

Chemical form of radionuclides:

C-14: The carbon 14 is incorporated in the steel. There may also be some contamination

as graphite.

CI-36: The chemical form of chlorine 36 has not been determined.

All of the waste will be bulk metal items which will be cut for packaging. Metal thicknesses Metals and alloys (%wt):

will probably range from a few mm to about 100 mm.

PACKAGING AND CONDITIONING

Conditioning method: The waste is not expected to be supercompacted. It will be placed in baskets in the

waste packages followed by encapsulation with BFS/OPC.

Plant Name: None

Location: Berkeley Site

Plant startup date: 2074 Total capacity ~5000.0

(m³/y incoming waste):

Target start date for packaging this stream:

2074

Throughput for this stream (m³/y incoming waste):

~67.5

Other information:

It is currently intended that these wastes will be grouted.

Likely container

type:

Container	Waste packaged (%vol)	Waste loading (m³)	Payload (m³)	Number of packages
4m box (no shielding)	100.0	16.2	18.9	17

Likely container type

comment:

The waste is assumed to be in baskets in the waste package so the occupied volume in the package is greater than the original waste volume. Container choice may be influenced by Transport Regulations at the time of Final Site Clearance.

Range in container waste

volume:

Not yet determined. No significant variability is expected.

Other information on

containers:

The container material is expected to be stainless steel.

Likely conditioning matrix:

Blast Furnace Slag / Ordinary Portland Cement

Other information:

Conditioned density (t/m³):

Conditioned density

comment:

The conditioned waste density assumes the waste will be encapsulated.

Other information on

conditioning:

The waste will be in baskets placed in the waste packages. Baskets of different Final Dismantling & Site Clearance ILW wastes may be in the same waste package. As encapsulation is now intended the matrix is likely to be BFS/OPC and the density of the conditioned waste product will be about 3 t/m3.

RADIOACTIVITY

Source: Activation of the mild steel and its impurities.

Uncertainty: The values quoted were derived by calculation from available material specifications and

are indicative of the activities that are to be expected. The major source of uncertainty is

the impurity levels.

Definition of total alpha and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities:

The specific activities were estimated from neutron activation calculations of impurities in

mild steel.

Other information: The activities quoted are those at 85 years after reactor shutdown, i.e. in 2074. There may

be some contamination by Cs137.
