

WASTE STREAM

9A83

Miscellaneous Contaminated Items

SITE	Berkeley
SITE OWNER	Nuclear Decommissioning Authority
WASTE CUSTODIAN	Magnox Limited
WASTE TYPE	ILW
Is the waste subject to Scottish Policy:	No
WASTE VOLUMES	Reported
Stocks:	At 1.4.2022..... 0.1 m ³
Total future arisings:	0 m ³
Total waste volume:	0.1 m ³
Comment on volumes:	Station operation ceased in March 1989. Accumulation of waste in this stream was in 1988. There will be no further arisings of this waste stream.
Uncertainty factors on volumes:	Stock (upper): x 1.1 Arisings (upper) x Stock (lower): x 0.9 Arisings (lower) x
WASTE SOURCE	Miscellaneous contaminated items from Berkeley Power Station.

PHYSICAL CHARACTERISTICS

General description:	The waste comprises miscellaneous items from the Berkeley Power Station, including graphite pieces, splitter material, tacky rags, broken tools and dusts. The waste is containerised in 5 litre and 0.5 litre paint tins. The tins will form part of this waste stream also. There are no large items that may require special handling.
Physical components (%vol):	The waste is expected to be ~50% mild steel (the cans), ~20% graphite material, ~15% plastics and ~15% dusts.
Sealed sources:	The waste does not contain sealed sources.
Bulk density (t/m ³):	0.64
Comment on density:	Calculated from total mass and volume of this waste.

CHEMICAL COMPOSITION

General description and components (%wt):	The waste is expected to be mild steel (the cans), graphite material, plastics and dusts. Fission products, actinides and other activation products will be present as contaminants.
Chemical state:	Neutral
Chemical form of radionuclides:	H-3: Tritium may be present as water, in the form of other inorganic compounds or organic compounds, or as tritium gas incorporated in metal. C-14: Chemical form of carbon 14 has not been determined but may be graphite. Cl-36: The chemical form of chlorine 36 in these wastes is not known. U: Chemical form of uranium isotopes has not been determined but may be uranium oxides. Pu: Chemical form of plutonium isotopes has not been determined but may be plutonium oxides.
Metals and alloys (%wt):	A small proportion of the metal will be the sheet metal (thickness probably about 1mm) of the cans containing the waste.

RADIOACTIVITY

Source: The radioactivity may have arisen both from activation and contamination while the material was used in the reactor area.
 Uncertainty: The values quoted are indicative of the expected activities.
 Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.
 Measurement of radioactivities: The specific activities were derived by estimation based upon available information.
 Other information: Specific activity is a function of Station operating history. Although this waste was originally classified as LLW, (since the activity is below the upper limit for LLW), it will be processed as ILW and so has been declared as ILW for this inventory.
