RADIOACTIVITY

Source: Contamination of materials.

Uncertainty: Activity values are current best estimates. Specific activity is a function of site operating history. The values quoted are indicative of the activities that would be expected.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: The specific activities have been developed using 9B910 and 9B951 as the basis with a suitable decay period to the beginning of Care and Maintenance
