

**WASTE STREAM****9C30****Miscellaneous Activated Components**

**SITE** Dungeness A  
**SITE OWNER** Nuclear Decommissioning Authority  
**WASTE CUSTODIAN** Magnox Limited  
**WASTE TYPE** ILW; SPD3

Is the waste subject to Scottish Policy: No

**WASTE VOLUMES**

		Reported
Stocks:	At 1.4.2022.....	52.0 m <sup>3</sup>
Total future arisings:		0 m <sup>3</sup>
Total waste volume:		52.0 m <sup>3</sup>

Comment on volumes: The station ceased generation on 31/12/2006.

Uncertainty factors on volumes:	Stock (upper):	x 1.2	Arisings (upper)	x
	Stock (lower):	x 0.8	Arisings (lower)	x

**WASTE SOURCE** Redundant or defective reactor components.

**PHYSICAL CHARACTERISTICS**

General description: Redundant or defective components such as absorber bars; stand pipe assemblies and charge chute assemblies. The possibility of large items which may need special handling has not been fully assessed. Items may weigh up to about 1.5 t; sizes may be up to 5 m long and approximately 250 mm diameter.

Physical components (%vol): Absorber bars, standpipe assemblies and charge chute assemblies. Volume breakdown has been estimated.

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m<sup>3</sup>): ~1

Comment on density: The assumption of 1 t/m<sup>3</sup> as the average bulk density may be subject to revision.

**CHEMICAL COMPOSITION**

General description and components (%wt): Irradiated components removed from the reactor. The material is principally steel (mild steel and stainless steel) and there is also graphite and concrete (graphite in absorber bars, concrete in standpipe assemblies). Presence of other minor components is not assessed.

Chemical state: Neutral

Chemical form of radionuclides: H-3: The tritium is likely to be incorporated into the steel.  
 C-14: Carbon 14 is incorporated in steel. There is also carbon 14 in graphite.  
 Cl-36: The chemical form of chlorine 36 has not been determined.  
 U: The chemical form of uranium isotopes has not been determined but may be uranium oxides.  
 Pu: The chemical form of plutonium isotopes has not been determined but may be plutonium oxides.

Metals and alloys (%wt): Metal thicknesses have not been fully assessed but bulk metal items may be present.

	(%wt)	Type(s) / Grade(s) with proportions	% of total C14 activity
Stainless steel.....	~59.0	Chromium and nickel will be present in the stainless steel.	
Other ferrous metals.....	~36.0		
Iron.....			
Aluminium.....	0		
Beryllium.....	0		
Cobalt.....			
Copper.....	0

**WASTE STREAM****9C30****Miscellaneous Activated Components**

Potential for the waste to contain discrete items:

Yes. Large Metal Items (LMIs)/"substantial" thickness items considered "durable" assumed DIs; Stainless items assumed DIs.

**PACKAGING AND CONDITIONING**

Conditioning method: The waste will be packaged into 4m boxes (with no shielding) and grouted in.

Plant Name: None

Location: Dungeness A Site

Plant startup date: 2092

Total capacity (m<sup>3</sup>/y incoming waste): ~5000.0

Target start date for packaging this stream: 2092

Throughput for this stream (m<sup>3</sup>/y incoming waste): ~10.0

Other information: The waste will be placed in baskets and then placed in the 4m box and grouted.

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m <sup>3</sup> )	Payload (m <sup>3</sup> )	Number of packages
	4m box (no shielding)	100.0	16.2	18.9	4

Likely container type comment: -

Range in container waste volume: Not yet determined.

Other information on containers: The container material is expected to be stainless steel. Container choice may be influenced by Transport Regulations at the time of Final Site Clearance

Likely conditioning matrix: BFS/OPC and PFA/OPC

Other information: It is not yet known which grouting mix will be used when this waste is processed.

Conditioned density (t/m<sup>3</sup>): ~3.0

Conditioned density comment: The density assumes conditioning with a cement based grout.

Other information on conditioning: The waste will be placed in baskets which are placed in the 4m box and grouted. Baskets of other SPD3 ILW waste may be in the same package.

Opportunities for alternative disposal routing: -

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment
-	-	-	-	-	-

**RADIOACTIVITY**

Source: Irradiated components removed from the reactor. Absorber bars are likely to be components of high activity.

Uncertainty: Specific activity is a function of Station operating history. The values quoted are indicative of the activities expected.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

**WASTE STREAM**

**9C30**

**Miscellaneous Activated Components**

Measurement of  
radioactivities:

Estimates are based upon theoretical assumptions.
