

**SITE** Hinkley Point A  
**SITE OWNER** Nuclear Decommissioning Authority  
**WASTE CUSTODIAN** Magnox Limited  
**WASTE TYPE** ILW  
 Is the waste subject to Scottish Policy: No

**WASTE VOLUMES**

| Stocks:                | At 1.4.2022.....          | Reported<br>29.2 m <sup>3</sup> |
|------------------------|---------------------------|---------------------------------|
| Future arisings -      | 1.4.2022 - 31.3.2023..... | ~0.8 m <sup>3</sup>             |
| Total future arisings: |                           | 0.8 m <sup>3</sup>              |
| Total waste volume:    |                           | 30.0 m <sup>3</sup>             |

Comment on volumes: 5m3 of this waste has been loaded into 2 DCIC mules, stored in the buffer store. Stocks and Arisings exceed Storage capacity, alternative storage arrangements will be required when waste is generated.

Uncertainty factors on volumes: Stock (upper): x 1.1 Arisings (upper) x 1.1  
 Stock (lower): x 0.9 Arisings (lower) x 0.9

**WASTE SOURCE** Spent ion exchange materials arising from the treatment of pond waters.

**PHYSICAL CHARACTERISTICS**

General description: The ion exchange material is stored under water in tanks. The ion exchange material flooded with water would be expected to have a voidage of about 0.3, i.e. about 0.3 of the volume of a bed of settled flooded ion exchange material would be interstitial water. There are no large items which may require special handling. Tank capacity is 26.2m3. The additional volume has been transferred to DCIC's.  
 Physical components (%wt): Dry resin (36%), water (63%) and other organics ~1%.  
 Sealed sources: The waste does not contain sealed sources.  
 Bulk density (t/m<sup>3</sup>): ~1.15  
 Comment on density: The bulk density of the waste is expected to range from about 1.1 to 1.2 t/m<sup>3</sup>.

**CHEMICAL COMPOSITION**

General description and components (%wt): Dry resin (~36% wt), water (~63% wt) and other organic material (~1% wt). The ion exchange material in the stock volume consists of Lewatit DN, Duolite and IRA 93 all immersed in water. Negligible inorganic resin is present.  
 Chemical state: Alkali  
 Chemical form of radionuclides: H-3: The chemical form of tritium has not been determined but may be present as water or as other inorganic compounds or as organic compounds.  
 C-14: The chemical form of carbon 14 has not been determined.  
 Cl-36: The chemical form of chlorine 36 has not been determined.  
 Tc-99: The chemical form of technetium has not been determined.  
 U: The chemical form of uranium isotopes has not been determined but may be uranium oxides.  
 Np: The chemical form of neptunium has not been determined.  
 Pu: The chemical form of plutonium isotopes has not been determined but may be plutonium oxides.  
 Metals and alloys (%wt): No sheet or bulk metal items present.

**WASTE STREAM****9D29****Ion Exchange Material**

Potential for the waste to contain discrete items: No. In & of itself not a DI; assumed not likely to contain any "rogue" items that could be.

**PACKAGING AND CONDITIONING**

Conditioning method: This stream is to be co-packaged with 9D25a, 9D26, 9D27 & 9D28. At the time of disposal, it is assumed 50 drums do not meet transport criteria and are therefore packaged into TRU-Shields (accounted for in 9D25b). However this will be dependant on the activity of each drum.

**RADIOACTIVITY**

Source: Spent ion exchange resins arising from the treatment of pond water. Contamination by fission products, actinides and activation products.

Uncertainty: Specific activity is a function of Station operating history. The values quoted are indicative of the activities that might be expected.

**WASTE STREAM****9D29****Ion Exchange Material**

Definition of total alpha  
and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of  
radioactivities:

The values quoted were derived by extrapolation from available measurements.

Other information:

## Bands (Upper and Lower)

A a factor of 1.5

B a factor of 3

C a factor of 10

D a factor of 100

E a factor of 1000

Note: Bands quantify uncertainty in mean radioactivity.

## Code

1 Measured activity

2 Derived activity (best estimate)

3 Derived activity (upper limit)

4 Not present

5 Present but not significant

6 Likely to be present but not assessed

7 Present in significant quantities but not determined

8 Not expected to be present in significant quantity
