

<b>WASTE STREAM</b>	<b>9D321</b>	<b>Contaminated Soil LLW</b>
---------------------	--------------	------------------------------

**SITE** Hinkley Point A  
**SITE OWNER** Nuclear Decommissioning Authority

**WASTE CUSTODIAN** Magnox Limited

**WASTE TYPE** LLW

Is the waste subject to Scottish Policy: No

**WASTE VOLUMES**

		Reported
Stocks:	At 1.4.2022.....	0 m <sup>3</sup>
Future arisings -	1.4.2085 - 31.3.2088.....	710.0 m <sup>3</sup>
Total future arisings:		710.0 m <sup>3</sup>
Total waste volume:		710.0 m <sup>3</sup>

Comment on volumes: Waste arisings are assumed to occur at a uniform rate over 3 years. Final Dismantling & Site Clearance is assumed to commence in 2081 and end in 2090. Reactor dismantling will commence in 2085 and last for three years. Volumes and radioactivity have been calculated for 85 years after reactor shutdown, i.e. 2085.

Uncertainty factors on volumes: Stock (upper): x Arisings (upper) x 1.2  
 Stock (lower): x Arisings (lower) x 0.8

**WASTE SOURCE** Contaminated soil that has resulted from plant operation and maintenance.

**PHYSICAL CHARACTERISTICS**

General description: Based on made ground and upper natural material descriptions: Generally a soft to stiff grey sandy clay with angular weathered mudstone and limestone gravel and cobbles. None larger than cobble sized limestone gravel fragments likely.

Physical components (%vol): Clay (60%), sand (25%), others (15%) (mudstone and limestone fragments).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m<sup>3</sup>): ~1.6

Comment on density: The bulk density is an estimate and may be subject to revision. Assumes bulkage factor (physical expansion) of around 1.3.

**CHEMICAL COMPOSITION**

General description and components (%wt): Soil, rubble, organic material and water. Percentages are not estimated.

Chemical state: Alkali

Chemical form of radionuclides: H-3: The tritium content is insignificant.  
 C-14: The carbon 14 content is insignificant.  
 Cl-36: The chlorine 36 content is insignificant.  
 Se-79: The selenium content is insignificant.  
 Tc-99: The technetium content is insignificant.  
 Ra: The radium content is insignificant.  
 Th: The thorium content is insignificant.  
 U: The uranium content is insignificant.  
 Np: The neptunium content is insignificant.  
 Pu: The plutonium content is insignificant.

Metals and alloys (%wt): There are no bulk or sheet metal items present in the waste.

	(%wt)	Type(s) / Grade(s) with proportions	% of total C14 activity
Stainless steel.....	0		
Other ferrous metals.....	0		
Iron.....			
Aluminium.....	0		
Beryllium.....	NE		

<b>WASTE STREAM</b>	<b>9D321</b>	<b>Contaminated Soil LLW</b>

**RADIOACTIVITY**

Source: Contamination that has resulted from plant maintenance and operation. Cs-137 is expected to dominate.

Uncertainty: Only approximate estimates have been made of the total specific activities. The estimates are typical of measurements at other sites, the activity may vary either way by a factor of 10. The activities quoted are those at the time of final site decommissioning.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: Provision of detailed data will have to await detailed site characterisation.

Other information: No radionuclides other than those listed are expected to be significant. The activities quoted are those at 85 years after reactor shutdown, i.e. in 2085. There may be some contamination by Cs137.
