**WASTE SOURCE** Nimonic springs are incorporated into Magnox fuel element top fittings and are removed during fuel element desplitting.

**PHYSICAL CHARACTERISTICS**

General description: Springs are about 33 mm long, 10 mm in diameter and weigh about 5 g. There are no large items present in the waste which may require special handling.

Physical components (%vol): Nimonic springs (~100 vol%).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m<sup>3</sup>): ~0.82

Comment on density: -

**CHEMICAL COMPOSITION**

General description and components (%wt): Nimonic (~100%).

Chemical state: Neutral

Chemical form of radionuclides: H-3: Tritium will probably be present as surface contamination, possibly as water but perhaps as other inorganic or organic compounds.  
 C-14: Carbon 14 is likely to be present in the form of graphite contamination.  
 Cl-36: Chlorine 36 will probably be present in the form of graphite contamination.  
 Se-79: The selenium content is insignificant.  
 Tc-99: The chemical form of technetium has not been determined.  
 Ra: Radium isotope content is insignificant.  
 Th: The thorium isotope content is insignificant.  
 U: Chemical form of uranium isotopes has not been determined but may be uranium oxides.  
 Np: The chemical form of neptunium has not been determined.  
 Pu: Chemical form of plutonium isotopes has not been determined but may be plutonium oxides.

Metals and alloys (%wt): Bulk metal items are not present in the waste.

**WASTE STREAM****9D40****FED Nimonic R2**

Potential for the waste to contain discrete items: Yes. Springs are DIs by definition

**PACKAGING AND CONDITIONING**

Conditioning method: -  
 Plant Name: -  
 Location: Hinkley Point A Site  
 Plant startup date: 2022  
 Total capacity (m<sup>3</sup>/y incoming waste): -  
 Target start date for packaging this stream: 2022  
 Throughput for this stream (m<sup>3</sup>/y incoming waste): -  
 Other information: -

| Likely container type: | Container               | Waste packaged (%vol) | Waste loading (m <sup>3</sup> ) | Payload (m <sup>3</sup> ) | Number of packages |
|------------------------|-------------------------|-----------------------|---------------------------------|---------------------------|--------------------|
|                        | 500 l RS drum (50mm Pb) | 100.0                 | 0.061                           | 0.316                     | 14                 |

Likely container type comment: -

Range in container waste volume: Waste loading has been set to 0.061m<sup>3</sup> per container to generate 14 expected containers.

Other information on containers: -

Likely conditioning matrix: Other information: -

Conditioned density (t/m<sup>3</sup>): -

Conditioned density comment: -

Other information on conditioning: -

Opportunities for alternative disposal routing: -

| Baseline Management Route | Opportunity Management Route | Stream volume (%) | Estimated Date that Opportunity will be realised | Opportunity Confidence | Comment |
|---------------------------|------------------------------|-------------------|--|------------------------|---------|
| -                         | -                            | -                 | -  | -                      | -       |

**RADIOACTIVITY**

Source: Nimonic springs originally incorporated into Magnox fuel element top end fittings and removed during fuel element desplitting. There will be activation products in the Nimonic and contamination by fission products and actinides.

Uncertainty: Specific activity is a function of Station operating history. The values quoted are indicative of the activities that might be expected.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

**WASTE STREAM****9D40****FED Nimonic R2**

Measurement of radioactivities:

Induced activity has been calculated and fission product and actinide contamination levels have been based upon measurements of the activity of Magnox samples.

Other information:

The Nimonic springs are expected to be of high activity.

**Bands (Upper and Lower)**

- A a factor of 1.5
- B a factor of 3
- C a factor of 10
- D a factor of 100
- E a factor of 1000

Note: Bands quantify uncertainty in mean radioactivity.

**Code**

- 1 Measured activity
- 2 Derived activity (best estimate)
- 3 Derived activity (upper limit)
- 4 Not present
- 5 Present but not significant
- 6 Likely to be present but not assessed
- 7 Present in significant quantities but not determined
- 8 Not expected to be present in significant quantity
