RADIOACTIVITY

Source: Nimonic springs originally incorporated into Magnox fuel element top end fittings and removed during fuel element desplittering. There will be activation products in the Nimonic and contamination by fission products and actinides.
 Uncertainty: Specific activity is a function of Station operating history. The values quoted are indicative of the activities that might be expected.
 Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

WASTE STREAM**9D44****FED Nimonic - R2**

Measurement of
radioactivities:

Induced activity has been calculated and fission product and actinide contamination levels have been based upon measurements of the activity of the Magnox samples.

Other information:

The Nimonic springs are expected to be of high activity.
