WASTE CUSTODIAN Magnox Limited

WASTE TYPE ILW

Is the waste subject to Scottish Policy: No

WASTE VOLUMES

| | | |
|---------------------------------|---|---------------------|
| | | Reported |
| Stocks: | At 1.4.2022..... | 10.0 m ³ |
| Total future arisings: | | 0 m ³ |
| Total waste volume: | | 10.0 m ³ |
| Comment on volumes: | Estimate of volume of sludge resulting from degradation of the Magnox FED described by stream 9D42. | |
| Uncertainty factors on volumes: | Stock (upper): x 1.2 | Arisings (upper) x |
| | Stock (lower): x 0.5 | Arisings (lower) x |

WASTE SOURCE Degradation of Magnox FED described by stream 9D42.

PHYSICAL CHARACTERISTICS

General description: Sludge resulting from the degradation of Magnox metal and swarf. The sludge contamination in the vault will be impossible to segregate from the other waste forms in the vault during retrievals.

Physical components (%wt): Magnox sludge (100% wt).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): 1.2

Comment on density: -

CHEMICAL COMPOSITION

General description and components (%wt): Magnesium hydroxide and magnesium carbonate (100% wt).

Chemical state: Alkali

Chemical form of radionuclides: H-3: Most tritium is expected to be present as surface contamination, possibly as water but perhaps in the form of other inorganic compounds or as organic compounds.
 C-14: Carbon 14 will probably be present as graphite.
 Cl-36: Chlorine 36 incorporated in the Magnox may be associated with barium impurity (barium chloride). Other Cl-36 may be associated with surface contamination.
 Se-79: The selenium content is insignificant.
 Tc-99: The chemical form of technetium has not been determined.
 Ra: The radium isotope content is insignificant.
 Th: The thorium isotope content is insignificant.
 U: The chemical form of uranium isotopes may be uranium oxides.
 Np: The chemical form of neptunium has not been determined.
 Pu: The chemical form of plutonium isotopes may be plutonium oxides.

Metals and alloys (%wt): -

WASTE STREAM**9D70****FED Sludge - R2**

Potential for the waste to contain discrete items:

No. In & of itself not a DI; assumed not likely to contain any "rogue" items that could be.

PACKAGING AND CONDITIONING

Conditioning method: Waste will be co-disposed with FED (9D42), springs (9D44) and gravel (9D46) streams in varying proportions which cannot be determined at this stage.

Plant Name: -

Location: -

Plant startup date: -

Total capacity (m³/y incoming waste): -

Target start date for packaging this stream: -

Throughput for this stream (m³/y incoming waste): -

Other information: -

Likely container type:

| Container | Waste packaged (%vol) | Waste loading (m ³) | Payload (m ³) | Number of packages |
|-----------|-----------------------|---------------------------------|---------------------------|--------------------|
| | | | | |

Likely container type comment:

Waste will be co-disposed with FED/springs/gravel streams in varying proportions. Container numbers are assigned to these other streams to prevent double accounting as the sludge contamination in the vault will be impossible to segregate from the other waste forms in the vault during retrievals as it takes up interstitial space in amongst the FED etc.

Range in container waste volume: -

Other information on containers: -

Likely conditioning matrix: Not specified

Other information: -

Conditioned density (t/m³): -

Conditioned density comment: -

Other information on conditioning: -

Opportunities for alternative disposal routing: -

| Baseline Management Route | Opportunity Management Route | Stream volume (%) | Estimated Date that Opportunity will be realised | Opportunity Confidence | Comment |
|---------------------------|------------------------------|-------------------|--|------------------------|---------|
| - | - | - | - | - | - |

RADIOACTIVITY

Source:

The source of the waste is the removal of splitters from fuel elements prior to dispatch of the elements to Sellafield. Activation of trace nuclides in the Magnox and contamination by fission products and actinides will be main sources of activity.

Uncertainty:

The values quoted are indicative of the activities that might be expected.

WASTE STREAM**9D70****FED Sludge - R2**

Definition of total alpha and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities:

Values were derived from measurements, calculations of induced activity and estimates of likely contamination.

Other information:

-
