

<b>WASTE STREAM</b>	<b>9E43</b>	<b>FED Nimonic</b>
---------------------	-------------	--------------------

**SITE** Oldbury  
**SITE OWNER** Nuclear Decommissioning Authority

**WASTE CUSTODIAN** Magnox Limited

**WASTE TYPE** ILW

Is the waste subject to Scottish Policy: No

**WASTE VOLUMES**

		Reported
Stocks:	At 1.4.2022.....	0.1 m <sup>3</sup>
Total future arisings:		0 m <sup>3</sup>
Total waste volume:		0.1 m <sup>3</sup>

Comment on volumes: Fuel element spiders (to which Nimonic springs are attached) have not been accumulated on site in significant numbers since the commissioning of a new desplitting machine in 1983. Following this, Fuel elements were then sent to Sellafield with the spiders, containing Nimonic springs, attached.

Uncertainty factors on volumes:	Stock (upper):	x 1.2	Arisings (upper)	x
	Stock (lower):	x 0.8	Arisings (lower)	x

**WASTE SOURCE** Nimonic springs from polyzonal Magnox fuel elements.

**PHYSICAL CHARACTERISTICS**

General description: Nimonic springs originally incorporated into Magnox fuel element top end fittings and removed during fuel element desplitting. There are no large items present in the waste which may require special handling.

Physical components (%vol): Nimonic springs (~100 vol%).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m<sup>3</sup>): 1.5

Comment on density: The density given is based on a packing factor of 5 times the displacement volume of the material. (The density will be only 0.4 t/m<sup>3</sup> assuming a packing factor of 5 times the cylindrical volume of a spring). The density range is not estimated.

**CHEMICAL COMPOSITION**

General description and components (%wt): Activated Nimonic (~100%) which may be contaminated by fission products and actinides.

Chemical state: Neutral

Chemical form of radionuclides:  
H-3: Trace amounts of tritium will be present as surface contamination.  
C-14: Trace amounts of carbon 14 will be present as graphite.  
Cl-36: Trace amounts of chlorine 36 will be present in graphite.  
Se-79: The selenium content is insignificant.  
Tc-99: The technetium content is insignificant.  
Ra: Radium isotope content is insignificant.  
Th: Thorium isotope content is insignificant.  
U: Trace contamination possibly as uranium metal or uranium oxides.  
Np: The neptunium content is insignificant.  
Pu: Trace contamination possibly as plutonium oxides.

Metals and alloys (%wt): No bulk or sheet metal items present.

<b>WASTE STREAM</b>	<b>9E43</b>	<b>FED Nimonic</b>
---------------------	-------------	--------------------

Potential for the waste to contain discrete items: Yes. Springs are DIs by definition

**PACKAGING AND CONDITIONING**

Conditioning method: -  
 Plant Name: -  
 Location: Oldbury Power Station  
 Plant startup date: 2023  
 Total capacity (m<sup>3</sup>/y incoming waste): -  
 Target start date for packaging this stream: 2023  
 Throughput for this stream (m<sup>3</sup>/y incoming waste): -  
 Other information: -

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m <sup>3</sup> )	Payload (m <sup>3</sup> )	Number of packages
	500 l RS drum (120mm Pb)	100.0	0.025	0.166	4

Likely container type comment: There are 115,000 Nimonic springs in total split between waste streams 9E40/41/42/43/44 which will be transferred into Mosaik DCICs. Waste streams 9E40, 9E41, 9E42, 9E43 & 9E44 will be packaged together.

Range in container waste volume: -

Other information on containers: Waste container and box numbers have been updated to reflect the information in LTP. However this is under review and will be updated when more data is supplied by the ILW team.

Likely conditioning matrix:

Other information: -

Conditioned density (t/m<sup>3</sup>): -

Conditioned density comment: -

Other information on conditioning: -

Opportunities for alternative disposal routing: -

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment
-	-	-	-	-	-

**RADIOACTIVITY**

Source: Nimonic springs originally incorporated into Magnox fuel element top end fittings and removed during fuel element desplitting. There will be activation products in the Nimonic and contamination by fission products and actinides.

Uncertainty: Specific activity is a function of Station operating history. The values quoted are indicative of the activities that might be expected.

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

**WASTE STREAM****9E43****FED Nimonic**

Measurement of  
radioactivities:

Induced activity has been calculated and fission product and actinide contamination levels have been based upon measurements of the activity of Magnox samples. Data taken from M/EF/OLA/EAN/0002/21 and underpinning calculation sheets.

Other information:

The Nimonic springs are expected to be of high activity.
