WASTE TYPE ILW
 Is the waste subject to Scottish Policy: No

WASTE VOLUMES

	Reported
Stocks:	At 1.4.2022.....
	34.8 m^3
Total future arisings:	0 m^3
Total waste volume:	34.8 m^3
Comment on volumes:	Volumes are based on 25 skips (24 long at 1.4m ³ & 1 standard at 1.2m ³).
Uncertainty factors on volumes:	Stock (upper): $\times 1.2$ Arisings (upper) \times Stock (lower): $\times 0.8$ Arisings (lower) \times

WASTE SOURCE Skips are / were used for the movement and storage of materials within the pond.
 Contamination from pond operations and plant operation.

PHYSICAL CHARACTERISTICS

General description: 25 contaminated skips. (24 long at 1.4m³ & 1 standard at 1.2m³).
 Physical components (%vol): Pond skips are made of mild steel and are coated in UPC paint.
 Sealed sources: The waste does not contain sealed sources.
 Bulk density (t/m³): ~0.3
 Comment on density: Density is based on the approximate weight of the skip of 0.42te and a volume of 1.4m³.

CHEMICAL COMPOSITION

General description and components (%wt): Steel and small amount of UPC paint. Fission products, actinides and other activation products will be present as contaminants.
 Chemical state: Neutral
 Chemical form of radionuclides: H-3: The tritium content is insignificant.
 C-14: The carbon-14 content is significant.
 Se-79: The selenium content is insignificant.
 Tc-99: The technetium content is insignificant.
 Ra: The radium content is insignificant.
 Th: The thorium content is insignificant.
 U: The uranium content is insignificant.
 Np: The neptunium content is insignificant.
 Pu: The chemical form of plutonium isotopes may be plutonium oxides.
 Metals and alloys (%wt): 25 pond skips are present, these are 1.357 m x 1 m x 1.029 m. and constructed from 3.2 mm 10 gauge steel plate.

Potential for the waste to contain discrete items: Yes. Large Metal Items (LMIs)/"substantial" thickness items considered "durable" assumed DIs; Stainless items assumed DIs

PACKAGING AND CONDITIONING

Conditioning method: This baseline is that waste will be size reduced at the site of origin and transferred to Hinkley Point A for packaging and storage. A characterisation review has identified deficiencies. Therefore, further sampling and analysis is required and subsequently the strategies will be reviewed.

Plant Name: Hinkley Point A

Location: -

WASTE STREAM**9E61****ILW Fuel Skips**

Plant startup date:

-

Total capacity

(m³/y incoming waste):

-

Target start date for
packaging this stream:

-

Throughput for this stream
(m³/y incoming waste):

-

Other information:

The ILW volume that we quote at the moment is the envelope volume of the skips.
 The skips are to be either size reduced at the site of origin before transfer to Hinkley Point A. Majority of waste to be co-disposed with SZA 9F39 and DNA 9C44 and therefore not included in waste loading/box numbers here, waste loading skewed to result in only 1 container for the skips that can not be co-disposed.

Likely container type:

Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
6m ³ concrete box (SD)	100.0	34.8	5.8	1

RADIOACTIVITY

Source:

Contamination from pond operations and plant operation.

Uncertainty:

-

Definition of total alpha
and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of
radioactivities:

Activities are based upon Hinkley Point A fuel skip calculations.

Other information:

-
